THE SIZE OF A NATURAL MARKET.

World Office, July 10.

What a remarkable difference between a market left practically to straight transactions between outsiders, and that operated by the station agents! The two examples are provided in today's Toronto stock market, and any one of the days of a few weeks ago, when transactions ran into thousands of shares. At this morning's board the total volume of business was less than five hundred shares, and for the day less than seven hundred. If the dealings in Rio were excited, and which is likely under the heading of the second example, a fair idea of the extent of public transactions in securities is available. Not a single share of Mackay was transferred during the morning, and of the other two active specialties, Sao Paulo supplied fifty shares and Twin City twenty-five shares. The market displayed no particular weakness, but the divergence between the bid and asked prices, and the entire absence of the latter in several instances could only lead to the inference that liquidation was not desired, except at a good round discount. The Toronto market was very much a replica of the Wall-street affair in a very much diminished form. New York was entirely uninfused by the monthly government report, which predicted a crop equal to that of last year, and a corn crop of even larger dimensions, and the query again arises why this apathy with such excellent market literature?
