

SIGHT FEED STEAM LUBRICATOR

The right kind of a Lubricator has been made at last

Double Connection

**MADE IN
CANADA**

Single Connection

THIS LUBRICATOR

Has special features and big advantages over other makes. For instance, the figure 1 shows the disc-shaped (perfectly clear) sight feed glasses. Note their position. C represents the same style of glass. These are practically non-breakable. The valves K and L are combined in one stem. The former regulates the oil drop and the latter drains the sight feed chamber. The drain valves L and B are fitted with a special stop lock and can not be jarred off and lost. The live steam is always contained in the chamber that passes through the body of oil. This feature makes the cup a cold weather lubricator.
