HICKMAN & SCRUBY

Court Lodge, Egerton, Kent, England
Exporters of Pedigree Live Stock of all descriptions

We are the only firm in Great Britain who make this their sole business, and therefore offer advantages not obtained elsewhere. When Mr. A. J. Hickman started this business seven years ago, he did not know a single foreign breeder. This year we have exported more stock to order than any other firm in Great Britain. This is a fact which talks. The frequency with which we buy stock from English breeders means that we can do business with them on more favorable terms than can be done by anyone else. No one should import draft horses, beef or dairy strains of cattle, or muton breeds of sheep, without first getting full particulars from us. Highest references on application.

STAMMERERS

can be cured, not merely of the habit, but of its cause. The Arnott Institute has permanently restored natural speech to thousands—is doing it to-day. Write for full information and references to:

Questions and Answers. Veterinary.

Bots—Partial Dislocation of Patella.

1. In mare's excrement I notice little grubs like bots.

2. Yearling colt's stifle comes out and in with a click when she walks. Our veterinarian gave me a blister for it, but it has done little good. J. M.

Ans.—1. These are bots, which pass off in the excrement as they let go of the lining of the stomach. No treatment is necessary.

2. This is partial dislocation of the stifle bone. All that can be done is keep her as quiet as possible and blister once every month, as your veterinarian directed. A recovery will not take place, but an improvement will, and the animal will be useful for slow work. V.

Injury to Jaw.

1. Six months ago a sore appeared on corner of heifer's jaw. It spread until the whole end of the jaw was involved and running ulcers formed. The teeth became loose and she salivated freely. My veterinarian said it was from an accident, and not serious, and he left treatment for her. She did not improve quickly and I called in another veterinarian who said it was cancer and that she would die soon. She continued hearty, calved all right, and is milking well. The jaw healed, and there is no odor, but is a little thickened, and the lip adheres to the jaw. She is in good flesh.

2. Is the milk fit to send to the factory?

3. If bred again, would bull or progeny be affected?

4. Is it illegal to use the milk from such a cow? J. H. S.

Ans.—1. The results indicate that the first veterinarian was correct, as a cure, with the exception of a thickening and adherence of lip to jaw (which are normal sequels to direct injury) has apparently taken place. If it be a case of lump jaw it will enlarge and probably break again.

2, 3 and 4. If this was really due to an injury, which the history of the case indicates, a cure has resulted and the milk is fit for any purpose, and it will be safe to breed her again, but if it be lump jaw it would not be legal to sell the milk nor wise to use it, nor yet wise to breed her. Better let your veterinarian see her again. V.

Miscellaneous.

To Kill Burdocks.

Editor "The Farmer's Advocate:"

In your issue of July 2, J. W. M. inquires as to the best way to destroy burdocks. I am pleased to tell him that I have found the thing that really kills them. About two tablespoonfuls of gasoline poured into the root where it leaves the ground will kill them entirely at any age. The destruction is absolute, for, eventually, there is a hole in the ground where the root was. I am glad to help anyone to rid themselves of this nuisance. A. E. H.

Per Cent Fat in Milk.

I have read with interest the articles on Milk-testing, by Prof. Dean, in your paper, and would like to ask a question. What per cent. should milk test sent to a cheese factory, when fifteen pounds of milk will make a pound of butter?

A. S.

Ans.—If 15 pounds of milk will make a pound of butter, 100 pounds of the same milk will make 6.6 pounds of butter. There is usually about one-sixth overrun, which is composed of water, buttermilk, salt, etc. Deducting this from the 6.6, it leaves 5.5 pounds butter-fat in 100 pounds of milk. Figuring on this basis, your milk should test 5.5-per-cent. butter-fat. You cannot place much confidence in this deduction. The calculations are correct, but so many conditions enter into the taking of samples or the percentage of overrun, and other circumstances, that we cannot say definitely that the milk you sent to the cheese factory should test 5½-per-cent. fat. We would advise you to have tests made at some dairy department if you are dissatisfied with the test made at the factory.

Worth thinking about

When you take out a policy in The London Life, you are figuring on certainties, not surmises.

THE COLD SIDE OF YOUR HOUSE

An ordinary furnace often fails to heat where the wind strikes.

That is because warm air travels in the line of least resistance. In an ordinary furnace no provision is made to thoroughly distribute the heat.

An ordinary furnace has an empty space between the fire-grate and the circulating pipes.

A Kelsey Warm Air Generator is different.

Surrounding the fire-grate, there are from 8 to 16 heavy cast iron tubes. Each of these tubes is really an independent heat generator. The weight of these tubes in the average size generator is about 900 pounds.

All the heat from the coal is concentrated in these heavy tubes. Once this great mass of iron becomes hot it stays so for

hours and hours and maintains a uniform pressure of warm air throughout the building.

Making these tubes Zig-Zag increases their heating surface and gives extra pressure without waste to all parts of the house.

With the Kelsey Generator the heating of the attic bedroom or the cold side of the house is no more a problem than the heating of the down-stairs living rooms.

Our booklet, "Achievements in Modern Heating and Ventilation," tells all about these Zig-Zag tubes. Write for it.
