## THE CANADA BRICK MACHINE

Patented 1868.

MEDAL and DIPLOMA awarded at the Provincial  
Exhibition, Montreal, 1859.

THIS Machine will mould 15 000 Bricks  
PER DAY, with the attendance of one man to  
put in the Clay, one man or smart boy to attend to  
the Moulds, three strong boys to wheel off the Bricks  
and back them up, and a small boy to sand the  
pallots.

To make SLOP BRICKS, less attendance than the  
above will be required.

By an alteration in the relative speed of the plinions  
and crown wheel, it will mould

30,000 BRICKS PER DAY.

The Clay can be moulded softer than by ordinary  
Machines, and the great pressure applied gives more  
solidity and strength to the Bricks. They also retain  
their shape, and dry much quicker.

This Machine is inexpensive and simple, and is  
adapted for either steam or horse power.

If a stone or other obstruction prevents the Moulds  
from moving forward, the Machine will not get out of  
order, but regulates itself.

Provision is made for giving the pressure required  
for soft or for a dry.

The corners are always well filled, and the Bricks  
turned out will be fit for front work.

It is undoubtedly the most perfect and suitable Ma-  
chine for making Bricks yet introduced into use.

NINE of these Machines worked by steam, and  
TWO by horse power can be seen in actual operation  
at the Steam Brick Manufacturing Establishment of  
the undersigned, head of Bank Street Montreal.

The CANADA AUTOMATIC BRICK MAKING  
MACHINE is manufactured and for sale (with the  
right of using it) by the Patentees
