

NEWS OF SPECIAL INTEREST TO WOMEN

TORY WOMEN HEAR WONDERS OF HYDRO

Hon. Adam Beck, in Address Tells What Has Been Done.

TOLERABLE FARM LIFE

Follows Invasion by Electric Light and Power - What Future Holds.

Adam Beck spoke before the ladies of Centre and South Toronto Conservative Association yesterday afternoon. He was introduced by Mrs. Arthur Vankoughnet, president of the society.

Because of its policy in conserving the resources of the country generally the present administration is now getting recognition all over the country. Mr. Beck told his hearers. Pulpwood was now turned out a finished product. Hydro was used for the benefit of the people and not exploited for the benefit of a few promoters.

In Europe conditions were different. A farmer could live on fifty acres of land in comfort. He was an intensive farmer, the wood was unknown, and comfort and even luxury had been introduced thru the medium of electricity.

In Ontario the government had introduced forty-six municipalities to introduce Hydro. Port Stanley had given sixteen thousand dollars towards the work, and in nine months the bank power had been introduced at a cheaper rate than it is given in Hamilton.

Another instance quoted was London. Where at the beginning of the year it had only 2500 users of electricity it now has 8600. Hydro is now the common commodity of the people for even the one-room shack is wired for lights.

Large things in view are the establishment of electric power.

GOOPS

Bowser Hewitt, if you please - He's always down upon his knees; So Bowser's trousers all are worn, And holes upon his knees are torn; And Mr. Hewitt, and Mrs. Hewitt, Say Bowser is a Goop, to do it!

Don't Be A Goop!

ishment of chains of radial railways and the establishment of central control telephones. said Mr. Beck. "Manchester has its penny fare by means of which the industrial workers may live in the open country and grow themselves and their children health. Thru the establishment of radials the same thing is possible in Ontario. The north country, too, may become the Philadelphia of Canada if its waters are directed to the creation of power.

WOMEN DRIVERS OF AUTOMOBILES

London Sees Advent of Girl Chauffeurs for Light Motor Cars.

LONDON, March 9.—With the advent of the light car, the field for women chauffeurs has enlarged considerably, and in London the number of women driving motors is increasing very rapidly.

In the motor car two ladies are especially recommended by the Royal Automobile Club, and any one noting the how rapidly this movement is spreading in addition to driving there are now employed as chauffeurs. They wash the car, and execute running repairs just as a car cleaner does the average chauffeur. It is, in fact, well established that mechanical knowledge is no longer a monopoly of a few men.

A paper on commercial motor vehicles read before the Association of Engineers-in-Charge recently by D. J. Smith, and he discussed the durability of the various types of these vehicles from the point of view of their own experience in a large repairing garage.

Another source of trouble in both cars and light trucks is the light valves that have been often designed to carry two or three light touring bodies, and thus, when used for commercial purposes, they are continually overloaded.

Many of these vehicles are, however, of the heavier types, and, as a rule, they are not overloaded. In all cases a simple chassis for a class of work, recommending a single or two cylinder engine rather than a four cylinder one, for heavy vans is also preferred to a chain-drive, since repairs to the bevel and differential gears were so often needed.

Turning to the consideration of steam vehicles, there was at present use chiefly the three ton and five ton sizes, and they were very successful in carrying a load of 1000 lbs. The repairs to petrol motors of this kind for five years amounted on an average to 35 per cent of the original cost, against 25 per cent for the steam type. He is emphatic in the case of the steam type, since it not only reduces the consumption of water, a point of great importance in a country where water is scarce. His firm, the latter says, have recently constructed a six ton steam wagon fitted with a feed-water heater and a superheater, superheating the steam to 600 degrees Fahrenheit at 300 pounds, which ran 150 miles on 250 gallons of water.

QUAINT MIXTURE OF OLD AND NEW

The following article, which appeared recently in The Truth, a weekly paper printed in Jerusalem in the English language, illustrates somewhat whimsically to what an extent the ancient and the modern are commingled in the near east of the twentieth century. It is the story of a theft of money.

Two weeks ago Jewry was greatly disturbed by the startling news that a gross of the charity was soon very evident, they apprised the Rabbis who assembled with other Jews at the Walling Wall and with solemn mien they deplored the crime as if it was striking at the roots of the Jewish faith. The Rabbis blew the trumpet or shofar and proclaimed anathema to the offender who had dared to stain the sanctuaries of the Jewish faith with an offence, at the same time he announced a reward of one-sixth of the stolen money to the person who should be the means

THIS IS THE PACKET That has revolutionised the tea trade of a continent. Last year over TWENTY SIX MILLION of them were sold.

SUGAR COOKERY

THE uses of sugar in cookery are so numerous that every one should be at some pains to acquire the skill necessary to boil it nicely. A different amount of cooking is required for the various results desired, but there are three stages, called "thread," "blow" and "ball" degrees, each of which is required to produce a certain result. Close watching will soon enable one to judge when the desired degree has been reached. The sugar, however, passes quickly from one stage to another so that a sugar thermometer gives exactness and saves trouble. A gauge costs from fifty cents to two dollars and is as necessary a kitchen utensil as a food chopper or an egg timer. Not only is a cooking thermometer useful in sugar cookery but in other branches as well, as when scalding milk and other liquids, or heating foods to destroy bacteria.

A simple syrup is one made with two parts sugar and one part water and boiled together until the sugar is dissolved. Such syrups are much better for sweetening lemonade, punches, ices and desserts than dry sugar, as the flavor and sweetening power more evenly and quickly distributed.

The thread degree is reached when the syrup threads from off the tip of the spoon. This is the proper degree for boiled ices.

Two minutes longer boiling will bring it to the soft ball stage, when it will be just right for fondants for candy making. A still longer boiling process is needed to produce what candy makers call the "crack" for making glace fruit.

Sugar's tendency to return to its original crystal form, or to granulate, must be constantly guarded against. It is almost impossible to work successfully with boiling sugar on a damp day, but a pinch of cream of tartar added will, will make it less liable to granulate.

Accidents are bound to occur with the first attempts at sugar cookery, but unless the sugar actually burns you can always add a little water and begin boiling it again.

A granite ware sauce pan is the best material for sugar cookery; it must be deep pan, testing tube and bristly without danger of boiling over. Besides the work the fondant on. A square platter does quite well for this if you have no marble. To glace fruit have it quite dry as the sugar will not cling to a moist or oily surface. Drop the fruit into the syrup one piece or section at a time and lift-out with a candy wire or two forks. Place on the slab to dry.

WEDDING RUMOR AT WASHINGTON

Eleanor Wilson, President's Daughter, Said to Be Engaged to McAdoo.

WASHINGTON, March 12.—Prospects of another White House wedding were made more definite today with the persistent renewal of the report that Secretary of the Treasury McAdoo and Miss Wilson had been betrothed. Her youngest daughter, one son and one daughter being married.

SEND CHILDREN'S CHOIR TO PANAMA EXHIBITION

J. L. Hughes has organized a plan for sending a choir of 40 to 50 Toronto public school children to take part in the singing competition at the Panama Exposition at San Francisco in 1915.

SOCIAL WORKERS' CLUB

Dr. H. L. Brittain, director of the bureau of municipal research, will address the Social Workers' Club this evening at 7 o'clock, in the Central Y. M. C. A.

Brandy to Cure Catarrh

Recent experiments have proved conclusively that catarrh is a constitutional disease, and that salves, sprays, urinals, etc., merely temporize with the disease, and seldom, if ever, effect a permanent cure. This being so, much time and money has been spent of late by a specialist in perfecting a pure and gentle, yet effective tonic that would dispel all traces of the catarrhal poison from the system. The result is given in the following formula, which has been found to produce most surprising results in an incredibly short time.

SMALLER CLASSES MEAN BIG SAVING

Now Found Unnecessary to Engage Thirty-Five Additional Teachers.

CUT DOWN MAXIMUM

Chairman McTaggart Hopes Forty-Five Will Be Next Figure Set.

Chairman McTaggart of the board of education has received the gratifying news that the reorganization of the four junior classes made remarkable progress since the first of March. So effective has been the reorganization under the reduced limit of fifty, and the activity of inspectors in stimulating promotions that the appointment of thirty-five additional teachers to the permanent places was rendered unnecessary, although they would have been required under the old system of packing the first book classes to suffocation.

FAMOUS JOURNEY OF ALEXANDER MACKENZIE

At the Canadian Historical Society yesterday afternoon Mrs. Sullivan, daughter of the late Henry Scadding, D.D., read her father's biographical sketches on Sir George Yonge and the Hon. Henry Dundas, for whom Toronto's first great thoroughfare has been named. The sketches were both intensely interesting, the style throughout being most effective. Miss Sullivan contributed a second paper which dealt with the famous journey of Alexander Mackenzie in 1781. Valuable maps illustrating the terrible experiences of this great explorer were also shown to the members. Tea was served at the conclusion of the meeting.

SUFFRAGE IS GRANTED TO DENMARK'S WOMEN

COPENHAGEN, March 12.—An agreement reached today between the Socialist, Radical and Moderate parties, which control majorities in both houses of parliament, assures the passage of the constitutional reform bill, under the provisions of which all women of legal age and qualifications are abolished and suffrage is granted to women.

THE GARDE RACHE

CONDUCTED BY RACHE R. TODD, M.D.

Some Fragrant Flowers from Seed

A correspondent has asked a question as to which may help him to find more than one gardener who has not yet sown his indoor seed boxes.

We always find these queries from our readers very helpful, as every query throws a different light upon the many difficulties constantly presenting themselves along gardening lines. "Oxford Blue" would like us to classify flowers that may be grown from seed, according to their fragrance or their non-fragrance, and while this is rather a large task to tackle, yet we may perhaps be able to aid him in some small degree.

ADOPTS PROGRAM OF IMPROVEMENTS

Niagara Falls Park Commission to Spend Quarter of a Million.

Plans for the expenditure of \$250,000 in improvements were passed by the Queen Victoria Niagara Falls Park Commission at the annual meeting yesterday. The plans include the following:

The construction of modern conservatories.

Demolition of the old Table Rock House, which obstructs the view of the southern end of the park, and the construction of a building in its place that will not interfere with the line of vision.

Completion of the parapet along the edge of the cliff.

Improvement of the descent under the falls.

Enlargement of the park area at Queenston Heights by the purchase of additional land, extending from the present main park entrance to the river gorge, thus affording the finest views on the continent.
