

THE STAR, ST JOHN, N. B. WEDNESDAY, AUGUST 26, 1908

SEVEN

## DR. J. W. LEE ON NEW YORK SOCIETY

Preached Sensational Sermon  
at Atlanta Sunday

Its Messianic Parables Would Have  
Disgraced Lewis XIV's  
Time.

One of the most sensational sermons of the year was that delivered at Atlanta, Ga., Sunday, by Dr. James W. Lee, pastor of Trinity Methodist church, and for several years a prominent St. Louis minister, roasting New York society and praising the efforts of Frederick Townsend Martin, one of his friends, to reorganize New York's 400.

"Upon Mr. Martin's return to New York from Europe last fall, he was asked to reorganize New York society," said Dr. Lee. "The whole glittering outrage upon ethics and propriety was in ruins. The 400 of Ward McAllister's reign were broken into small coteries and sets—all pitiable, all miserable, and all more or less withering under the lash of criticism, provoked by scandalous living on the part of this or that one of their members."

WORSE THAN IN LEWIS XIV'S TIME.

"Society had become ludicrous, vulgar and unworthy. Nonsensical, tasteless parties were given that would have disgraced the court of Louis XIV. Society had sentenced itself and worked itself into an animated heap of breathing wretchedness. The top and privileged crust had played with fire until it found itself burnt black. The reins had been thrown on the necks of appetites until the unrestrained elements of human nature had brought them face to face with a wilderness of disillusionment and chaos."

"Public opinion had been defied until they found themselves sprawling beneath successive installments of public contempt. In all this array of humanity there was many self-denying, self-respecting, splendid men and women, but the most daring and lawless played the music the public heard and to which the public supposed all were dancing."

"It was society in New York, thus disorganized, dismembered, disintegrated, that Mr. Martin, with the aid of those leaders in it who had always deplored its waywardness to re-establish upon the basis of good taste and sound morality."

MARTIN INAUGURATES NEW ERA.

"To his first reception he invited 1,000 people, not because they were rich, simply or mainly, but because they were interesting and cultured and upright in life. After the season was over it was understood by all that a new era had been inaugurated in New York entirely."

"People of wealth and leisure who make up society owe it not only to themselves, but to all the community, to lead lives above reproach. No station is high enough and no wealth is ample enough to absolve any class of any population from the ordinary principles of common morality."

"Society in New York has misused the point of sanity and morality no farther than has society in many other American cities. We know that society in San Francisco and in Pittsburgh has suffered from the sins of conspicuous consumption for years. Why other cities are not well acquainted, because, if they are as bad, they have had the good fortune to miss being advertised through the press so extensively."

FOUND COWS WADING  
IN CITY RESERVOIR

Monoton Board of Health Members Found  
Conditions Not All That Might Be  
Desired at Source of Water Supply

(Transcript).

Rotton wood, stumps of trees, logs and cows wading in the water, was the sight that met the gaze of the Board of Health members who visited the city reservoir yesterday afternoon on an inspection tour. It was not at the lower end of the reservoir, however, that these conditions were found, but at the extreme upper end where no person ever visited except at lengthy intervals. Looking from the high bank at the head of the reservoir one sees a beautiful stretch of water that extends for several hundred yards where a bridge can be seen running across at about the middle of the reservoir. This bridge is the means the Buctouche train has for getting from one side to the other, and is the cause of much complaint from the Board of Health. The board members have discussed the matter on several occasions, and the annoyance it causes them has brought up some very animated discussions and much indignation. Further up there is a turn which makes it impossible for the visitor to obtain a glimpse of the state of affairs in this section of the reservoir. However, the members of the Board of Health and two press representatives who visited the place yesterday afternoon, drove in a round-about way over a road that was now too good, it being barricaded with logs and trees and crossed by several ditches filled with mud and water, to the end of the reservoir, and there saw what has not yet been seen by the majority of Monoton citizens. At the edge of the water, which is in close proximity to the reservoir, there is a fringe of rubbish of all sorts, such as dead branches and other rotten pieces of wood. Further out in the water stumps of trees are plainly visible, the heavy having the appearance of a good sized swamp much more than of a reservoir where the people of the city obtain their

## CANADA IMPORTED 61,783 HORSES

Record Breaking Number of Animals Sent  
From Great Britain to the Dominion  
Last Year—Daily Conditions.

LONDON, Aug. 26.—Great Britain in 1907 exported to Canada 61,783 horses, the highest export ever known, though the total value of £1,340,000 was exceeded in 1908. Canada comes first of all the countries as a purchaser of stallions and second only to Belgium as a purchaser of mares.

The Colonial Dairy Produce Review states the Canadian butter export was the smallest known. Since 1886, three years ago, it reached its highest level of 15,145 tons, and last year fell to 11,382 tons. The quantity again showed an improvement over the previous year, and as the refrigeration on board the steamers to the United Kingdom has been improved, the Canadian butter is now perfectly up to date, Canadian butter ought to further improve in quality and bring higher prices in our markets.

Some inferior quality which yet came from the United States caused a decrease from Canada and the United States, and this decrease has given opportunity to New Zealand to make up some of the deficiency in imports which have advanced in ten years from 8,870 tons to 13,132. Improvement in quality has been made on the Canadian Improved method, and Canadians have added largely to better quality which now prevails.

Australia last year sent a small shipment of cheese to London, and the quality was very satisfactory. One shipment from New South Wales was superior in quality to the best Canadian cheese, and it being made on the English Cheddar principle. It approached very closely to the English conditions in manufacture in having the milking herd close to the factory door, so that the milk was always in a sweet condition.

CUT DEATH RATE IN HALF.

Nathan Straus, in London, Says He Can  
Do It by Pasteurizing  
Infants' Milk.

LONDON, Aug. 26.—Nathan Straus is in London on his way back to New York, after an absence of thirteen months, which has been occupied in pasteurizing milk in Germany, Austria and England. Mr. Straus is enthusiastic enough to undergo the difficult operation for the removal of the tumor, which he had been told would be a very difficult one, and he has been very successful in his work.

His system of pasteurization has been officially adopted by the Austrian Ministry of Interior and by the authorities of many German cities, while in England it has received the sanction in support of hundreds of medical men. Perhaps the most interesting feat accomplished in connection with Mr. Straus's work on the continent has been his experiment in Sandhausen, a village in south Germany. Sandhausen has a population of 4,000 and had a very high infantile death rate. Mr. Straus was satisfied that this was due to the quality of the milk supply, and he made arrangements to take charge of it. Since January 1 last every drop of milk supplied to the people of Sandhausen has been pasteurized by Mr. Straus's system, and the results have been remarkable. In the first seven months of 1907 thirteen children under one year of age died. In the first six months of the present year, during which they have been supplied with pasteurized milk, only nine children died.

"This conclusively proves," said Mr. Straus to the correspondent of the New York Times, "that two out of every three children who die under one year of age are killed by raw milk. I want no easier job than to go into a town and reduce the death rate of that town. I will undertake to cut it half at once by merely pasteurizing the milk on which the children are fed."

Mr. Straus is crossing to Dublin tomorrow, where he will be the guest of the Viceroy and Lady Aberdeen at the Victoria Lodge until Thursday, when he sails for Queenstown on the Cedric. When he is making his campaign for milk pasteurization in London last spring Mr. Straus presented a fully equipped plant to Lady Aberdeen for supplying pure milk to the poor mothers of Dublin, and he is going over now to see how it is working and to give those in charge of it the benefit of his experience.

The first showing of the early fall costumes at F. W. Daniel and Co., Charlotte street today. This coming season in ladies' suits. The styles are so decidedly new, and the prices so much more moderate than for several seasons past. There is also another reason, in the prevailing designs of the coats are mostly much longer and some are of that new pointed effect which looks so stylish with small fur and really take the place of the heavier separate winter coats. This early collection of costumes at Messrs. F. W. Daniel and Co., includes very attractive pumps which will not be found elsewhere. First choice is a most satisfactory.

ST. LOUIS, Mo., Aug. 26.—Wrote F. Falk, 26 years of age, at different times manager of the Lillian Russell, the David Warfield and the Edna May theatrical companies, did last night of congestion of the lungs.

## TRANSFUSION GIVES WIFE NEW SOUL

Woman Saved by Transfusion  
Shows Traits of Spouse

The Medical Society to Discuss the  
Patient's Change Mentally and  
Physically.

Surgeons of St. James hospital, Newark, N. Y., believe they have made an important discovery in the case of Mrs. Anna Bradley, who, it is said, has undergone a complete mental change since a pint of her husband's blood was infused into her veins. Since then she has gradually lost her own mental traits and acquired those of her husband, which were directly the opposite of her own.

THE ONLY EXPLANATION POSSIBLE, according to the doctors, is that the blood of Patrick Bradley has so changed his wife that she has in reality become a part of him. The matter which will be discussed by the medical society at the next meeting of the Essex County Medical Society, opens all manner of possibilities. The doctors of St. James already believe that they detect a slight change in the voice of Mrs. Bradley, who had been a most effeminate woman before the blood transfusion, but who now is said to be developing muscular prowess and whose voice is several keys lower than when she was submitted to the hospital.

WAS DESPONDENT WOMAN.

The case is pronounced one of the strangest which has come to the medical authorities for many years. Mrs. Bradley, the delicate wife of Patrick Bradley, a prosperous, healthy, and strong business man of Newark, living at No. 15 Grove street, was found several weeks ago to be suffering from a tumor. It was determined that she should die unless relieved of the tumor, but when she reached St. James Hospital the surgeons refused to operate on her, saying that the tumor had made such progress that it was impossible to remove it. The tumor was said to be a fresh supply of blood, and the only chance she had was to get a fresh supply of blood from her husband. Her husband, strong and healthy, volunteered while he lay beside his wife on the operating table on July 17, to give her his blood. The doctors, who were surprised to find her strength had been sapped by it. The only chance she had was to get a fresh supply of blood from her husband. Her husband, strong and healthy, volunteered while he lay beside his wife on the operating table on July 17, to give her his blood. The doctors, who were surprised to find her strength had been sapped by it. The only chance she had was to get a fresh supply of blood from her husband. Her husband, strong and healthy, volunteered while he lay beside his wife on the operating table on July 17, to give her his blood. The doctors, who were surprised to find her strength had been sapped by it. The only chance she had was to get a fresh supply of blood from her husband. Her husband, strong and healthy, volunteered while he lay beside his wife on the operating table on July 17, to give her his blood. The doctors, who were surprised to find her strength had been sapped by it. The only chance she had was to get a fresh supply of blood from her husband.
