March 28.

IXX,
Amniyain of the Water of the Georgian adjusting of the Water of the Georgian of the Spring.

I have made a careful quantitative analysis of a quantity of this Water sent me by the Proprietor of the Spring. Captain Kains. It is a Saline Water, containing earthy Chiorids, with portions of Bromids and Iodids, thus reseembling the Planting of Bromids and Iodids, thus reseembling the Planting enter Water, from which it differs chiefly in the presence of a portion of Sulphates, which are not often met with in Waters of this cleas in the Province. It has a specific gravity of 1008.78, and contains in one pound avoirdupons, the affixed quantities of the following substances:

Chlorid of Sodium.

Chlorid of Potassium.

Chlorid of Potassium.

PREPARED GUANO.

The Subscriber is now receiving a supply for Fall Seed nowing.

To THE LAPIES.

The Prepared Guano is put into boxes, expressly for Gardeus. Its fertilities generate a supply for Fall Seed nowing.

To THE Subscriber is now receiving a supply for Gardeus. Its fertility of Gardeus. Its fertility of Gardeus. Its fertility of Gardeus as the requires and other fertilizing gners are absorbed, fixed, and ore given out to regulation only as it requires them. No rot, mildew, worm, fly, nor other inscribed part of the following substances in t

Ducco, in the west total similar, and relevanting, or enterioring and fertilizing such lands as have been worn and adhadoned.

One advantage Prepared Guano possesses over ordinary Manure, is, that in sowing all kinds of grain, &c., it should be used broadcast after the ground is ploughed, and then harrowed in with the seed. Or it may be used to any time, as a top-dressing. One men can the senanter and seed donen six acres a day, which is an actual s-wing, in labor, of the whole cost of the manure. Grounds intended for manuring, therefore, need not be seeded before the 10th or 20th of October, which affords the farmer the advantage of pasturing his fields five or six weeks longer than usu-it. It gives him time to gather in his crops, which are often neglected for the sake of preparing the glound tenited to seed down for grain, grasses, &c., so as to get them in by the 10th of September.

It is recommended to start Corn first, and when it is up from four to six inches, the Parrawen it is up from four to six inches, the Parrawen it is not should be spread over the surface, dad covered in at once. For Potatoes, a large table appointul stould be used, mixed up with the earth, and when hill or drill.

For Greenhouse Plants, Flowers, Vines, Well in each hill or drill.

For Greenhouse Plants, Flowers, Vines, Well in Fluit, and the like, it is only requisite to spread a handled to two good her surface round the eine will be all that can be desired.

MILLE PLIESELL.
