

**is a Real
Dyspepsia Cure.**

Digestion, Gas, Heartburn or headache five minutes later.

Question as to how long you will continue to suffer from indigestion, Dyspepsia or out-of-order stomach is merely a matter of time if you begin taking some Diaperin.

Your Stomach is lacking in digestion, why not help the stomach to work, not with drastic medicine but a re-enforcement of digestion, such as are naturally at work in the stomach.

Little Diaperin occasionally will be no more indigestion, but a lump of lead in the stomach, no heartburn, Sour risings, Stomach or Belching of undigested food, Headaches, Dizziness of the head, and besides, what you do not ferment and poison your system with noxious odors. All symptoms resulting from a sour stomach and dyspepsia are generally relieved in five minutes taking a little Diaperin.

Go your druggist and get a 50-cent box of Diaperin now, you will always go to the table with hearty appetite, and what you eat will taste good, because your stomach and intestines will be clean and fresh, and you will know there is going to be any more bad and miserable days for you. Refresh your system and make your life worth living.

ough Up Country.

R. N. Co's people report the extra severe along the line of the day. Strong winds prevail at several stations, and the snow in the Gulf Topsails down to Brook, has been the heaviest in years, the Humber is frozen and the vessels seeking a command of the herring voyage, have to get out in the Arm to escape the forces of J. Frost, who works out of any Hague Tribunal.

OUT FROM THE COUNTRY. A day of purchase and business very few people are in the country, evidently pre-fering the warmer solitudes of the sea to the cold turmoil of the

nday Services.

CHURCH OF ST. JOHN THE BAPTIST.—Communion every Sunday at 8:30 a.m. on the first Sunday of the month, and 7 and 8 a.m., and 12 noon, every Sunday at 11 a.m. and 6:30 p.m.

Low Price on Ladies' First Quality

Canadian RUBBERS!

Having secured a quantity of LADIES' FIRST QUALITY CANADIAN RUBBERS, with ROLL EDGE, we offer them this week at Sixty Cents

60c. per pair.

Here is something genuine for you, each pair has first quality Canadian Stamp on them and are sold elsewhere at 90 cents per pair.

All sizes, from 2 1-2 to size 7.

S. MILLEY, Water St.

is now required, together with the labour employed in cleaning up and getting rid of the effects of burning coal according to our present methods, would all be available for additional manufacturing of the articles now imported and for use on the land.

To Improve Social Conditions.

"Cheap electricity would greatly stimulate all manufacturing operations, which would, in turn, enable labour to be much better remunerated than at present, and to enjoy a much higher standard of comfort. The higher value of labour would in its turn stimulate inventiveness, and the production of all sorts of labour-saving appliances, which, with cheap electricity, would enable us to produce in the future under suitable market conditions at cheaper rates than are now possible, notwithstanding the better return that labour would obtain.

"Great hardships are always produced where any great industrial change is made, but the more efficiently we can carry on the work of the country the more margin must there be for the great majority of the people, so that any change which decreases the amount of labour required must eventually give the people greater comfort and less arduous work. It is hardly necessary to point out how much better the position of the country would be if we were producing the whole, or nearly the whole, of our requirements, as in this case we should be far less liable to be adversely affected by any external causes or by the occurrence of any great war.

How Long Before It Comes?

"What interests us most, perhaps, is the question of how long it is likely to be before the all-electric idea becomes possible. At present there is much required to be done to make it workable in all its details that it seems as though its realisation would be long deferred. It must, however, be remembered that knowledge is continually being acquired which brings us nearer to its realisation, and that things engineering, especially in electrical engineering, now move more rapidly. It may therefore come to pass that the all-electric idea, with its far-reaching changes and great benefits, will become an accomplished fact in the near future."

A LONG PASSAGE.—It is believed that the schr. Invermay is still harbored at Trepassey. She is six weeks out from Bay of Islands with fish for Jas. Baird, Ltd.

WORKED WONDERS IN THIS CASE.

RHEUMATISM AND WEAK HEART CURED BY DODD'S KIDNEY PILLS.

The Doctor helped Mrs. Stephen Roy, but there was no complete cure till she tried Dodd's Kidney Pills.

Rock Mills, Grey Co., Ont., Jan. 20. (Special).—"I must say Dodd's Kidney Pills worked wonders in my case," says Mrs. Stephen Roy of this place. "I suffered with inflammation, rheumatism in my right arm, and though I tried several remedies the swelling increased and was very painful. My hands and limbs were also badly swollen.

"I got a doctor and he helped me, but the swelling never entirely left. He said it was because my heart was weak. Then I decided to try Dodd's Kidney Pills and, as I said before, they worked wonders."

Rheumatism of any kind is caused by disordered Kidneys, failing to strain the uric acid out of the blood. Dodd's Kidney Pills cure it by curing the Kidneys. They also cure the weak heart by making pure blood and lessening that organ's work of propelling the blood through the body.

Dodd's Kidney Pills only cure the Kidneys, but they always do that. And with healthy Kidneys you can't have Rheumatism, Lumbago, Heart Disease, Dropsy or Bright's Disease.

An unknown man threw concentrated lye in the face of Miss Myrtle Hurney, who is a belle in Oakdale, a fashionable suburb of Pittsburg, and disfigured her for life. The attack occurred while Miss Hurney was on her way home. Her brother, fourteen years old, was walking in front of her. After the attack the man fled. About two years ago Miss Hurney had an admirer, but she refused to become his wife. Soon she began to receive letters threatening her life.

To Save Coal and Labour.

"Considering the general effect of the all-electric scheme, in which, with but small exception, the whole of the coal used is turned into electricity, the first important effect would be the saving of some 80 to 90 million tons of coal a year. As we should produce the whole of our food requirements, we should not have to export our coal in the form of coal to help pay our food bill. In this way, by making these two savings, we could prolong the useful life of our coal measures two and a half times, and still have 20 million tons of coal a year available for the use of our steamships over and above the coal required in the country."

"The saving of labour now employed in raising the vast amount of coal which we now waste or send abroad, and also the labour employed in transporting this coal and using it for all the various purposes for which it

Evening Telegram Fashion Plates.

The Home Dressmaker should keep a Catalogue Scrap Book of our Pattern Cuts. These will be found very useful to refer to from time to time.

8815. A Smart Blouse for Misses or Small Women.

This simple model is suitable for flannel, cashmere, silk or wash fabrics. Wide tucks over the shoulders in Gibson style give the broad effect so universally becoming. They are stitched to yoke depth in front and to the waistline in the back. The front is closed in coat style. The pattern is cut in 3 sizes—14, 16, 18 years. It requires 3 1/2 yards of 24 inch material for the 16 year size.

A pattern of this illustration mailed to any address on receipt of 10c in silver or stamps.

8821. Girl's Dress.

Mother's daughter will look quite smart wearing a dress this fashion. The yoke may be of lace or tucking, the dress proper of cashmere, panama or cloth, with braid for trimming. The pattern is cut in 4 sizes—8, 10, 12, 14 years. It requires 5 yards of 24 inch material for the 10 year size.

A pattern of this illustration mailed to any address on receipt of 10c in silver or stamps.

PATTERN COUPON.

Please send the above-mentioned pattern as per directions given below.

A Scientist's Practical Dream.

How to Save 90 Million Tons of Coal Yearly to Avoid Useless Labor, to Increase Our Food Supply, to Give Cheap Power and Heat.

(Concluded.)

The Advantages.

"Summarising the whole position, it may safely be said that, wherever coal, gas, or power is now used, sulphate of ammonia, nitrate of soda, everything for which they are used will be better done when electricity is the medium of application.

"Hardly less in importance in the all-electric scheme is the question of the by-products which become available by the proper use of our coal. These consist principally of fixed nitrogen, together with tar and oils.

"Fixed nitrogen in the forms of, and nitrate of lime are most valuable fertilisers, and enable land continuously to produce the same crops with

a greatly-increased yield per acre. Much has been done in finding out how best to utilise these artificial fertilisers; but no doubt a great deal more will be done in this direction, and fertilisers will be prepared, with fixed nitrogen as their principal constituent, which best suit the particular soils and crops that it is desired to deal with.

To Increase Our Crops.

"According to last year's Board of Trade Returns, we now grow about 25 per cent. of the total wheat that we use and import 77 per cent. Of the barley used we grow 69 per cent. and import 31 per cent., and of the oats used 78 per cent. is home grown and 22 per cent. imported. Last year we devoted 7 1/2 million acres to the cultivation of these crops.

"Much is being done to improve the yield of corn crops, and it is probable that with scientific treatment in the production of the seed, in the sterilisation of the ground, and in the application of fertiliser, we may look at no distant date to an increased yield of 50 per cent. in these crops upon what is now being produced per acre. The most vital feature, however, in bringing this about, once we have acquired sufficient knowledge, is an ample supply of fixed nitrogen to use as fertiliser, and it is when considered from this point of view that a scheme which supplies this from our coal as the result of saving present waste is most important.

"With the increased yields which we have mentioned, we could produce corn crops sufficient to supply the whole of our requirements upon 11 million acres. This would represent 23 1/2 per cent. of our present cultivated area, and would only be an addition of 3 1/2 million acres to the land now used for the purpose of growing these same crops. The value of these additional crops would be about 55 millions sterling, based upon the prices which we paid last year, and to this would have to be added the value of the straw and the other wheat by-products, which would go a long way towards providing the food for growing the additional meat which we require to supply our demand at home.

"In order to fertilise the land we should have available, under the all-electric scheme, 3 million tons, or its nitrogen equivalent, of sulphate of ammonia. This, if used over the whole of the 46 1/2 million acres now under cultivation, would give 142 lb. per acre.
