Frost Saved the Crop
Atlanta, Ga., April 26.—Cloudy weather last night saved Georgia from a killing frost, which undoubtedly would have completed the destruction of the fruit and vegetables, which have been damaged to the amount of hundreds of thousands of dollars. The weather continues cold, the thermometer being around forty degrees.

Investigation is Killed
Albany, N.Y., April 26.—By the decisive vote of 116 to 32 the assembly today refused to withdraw from the Ways and Means committee the Loomis resolution for the appointment of a commission to investigate the New York stock and consolidated exchanges and all other exchanges throughout the state. This kills the measure.

The Most Vital Diseases
New York, April 26.—Cancer heads the list of diseases which the Bureau of health finds are causing an increased mortality in New York. Others are appendicitis, cirrhosis of the liver and scarlet fever. Deaths for the quarter totalled 20,650 against 19,543 for the corresponding quarter last year.

PUBLIC NOTICE

UNCLAIMED land warrants issued to members of the Red River Expedition of 1870, 1871, 1872 and 1873, and to members of the North-West Mounted Police. NOTICE is hereby given that warrants, entitling in each case the grantee or his assignee to a free grant, without actual residence or settlement duties, of a quarter section of Dominion lands, containing 160 acres, of the class open to homestead entry in the Provinces of Manitoba, Saskatchewan or Alberta, which were issued some years ago by the Department of the Interior for service in the North-West Mounted Police to the persons hereinafter named, have not yet been delivered owing to the fact that they have not been applied for by the grantees and that their addresses are not known to the Department. The warrants in question will be delivered to the grantees thereof, or in case of their death, to their personal representatives, upon satisfactory evidence being sent to the Secretary of the Department of the Interior, Ottawa, that the applicants are entitled thereto.

The undelivered warrants above referred to are the following:

DR. LEE DE FOREST TO LECTURE ON WIRELESS TELEPHONY

Here to Select a Site for a Wireless Telephone Station.

Dr. Lee de Forest, the inventor of the system of wireless telephony, which has so far attained the highest degree of commercial success, arrived in the city today. He is here to select a site for the erection of a long distance wireless telephone station, which will be one of the links connecting the Atlantic with the Pacific Ocean. The plans of the company include stations to be erected in Winnipeg, Regina, Moose Jaw, Calgary, Victoria and Vancouver. From these points, connection by wireless telephone may then be carried on to points within a comparatively short distance.

Dr. de Forest, in explaining the progress of his invention, said that one of the features is the fact that so little energy is required to handle it. For instance, the largest type of Marconi station may require from 25,000 to 40,000 watts, and a voltage of from 25,000 to 40,000. In the Radio system, the voltage seldom exceeds 1,000, and but two or three kilowatts are needed. Owing to the difference in the currents used and the type of machine, the two systems may operate in the same field without conflict. His system employs a continuous wave, while the Marconi uses the heavy spark for setting up vibrations in the ether.

First Long Distance Experiment
While in Italy in 1908, installing his system in the Italian navy, the doctor conceived the idea of carrying on a series of experiments for long distance transmissions overland. An instrument was installed on the Eiffel Tower, Paris, and messages were sent to Marcellus, 550 miles away. More recently installations have been put in at Chicago and Milwaukee, where telephonic communication for the 99 miles is easily carried on. With recent improvements he says that the land range under reasonable atmospheric conditions, is 500 miles, and that Dr. Seibt, with whom he has been associated, has sent messages 1,277 miles over the sea. The flat prairie country he considers as especially favorable for wireless work. In fact, an enthusiast might be tempted to see visions of a plant in the home of each of the well-to-do western farmers.

Dr. de Forest is a most interesting personality, and a brilliant talker. Though but 36 years of age, his work has placed him among the leading scientific men of the age, for his patents cover practically the whole of the present known field for wireless telephony. He was born in Council Bluffs, Iowa, but was reared in Alabama. When but a boy, he had scientific leanings, and his first experiments in the electrical field were prompted by the scientific department of the Youth's Companion. While attending the public school, he was still working with home made apparatus, and later at Yale he went in for the scientific course, specializing on electricity. The Hertzian wave attracted him, and later while in the employ of the Western Electric company, in their electrical department, he spent his spare time on a detector for handling the waves, as sent by the Marconi system. The finding of such a detector led to the present inventions which are now being placed on the market.

A talk on wireless is so replete with technical expressions, and terms which are beyond the layman, that Dr. de Forest has prepared a lecture in which he has tried to translate these expressions, and arrangements are being made for delivering it in Calgary. It will be given on April 27th, next.

THE DEATH WARRANT DELIVERED

No defence can be offered when you resist a death warrant. The offender has to die. Nothing so certain to quickly cure corns as Putnam's Corn and Wart Extractor; try Putnam's. It's free from acids, and painless.

Y. M. C. A. in Chicago

(Chicago News)
Chicago's future depends mainly upon its growing boys and its beginners in the business world. That men and women who have seen much of life generally recognize the importance of opening all possible doors of knowledge and opportunity for the business men of tomorrow is shown by the generous response which has been made to the appeal of Chicago Young Men's Christian Association for funds with which to do its work.

The outcome of the campaign so energetically conducted by friends of the association and of Chicago is most gratifying. It should give to everybody still greater faith in the future of this city, not only because of the useful activities which the newly secured funds will enable the Y. M. C. A. to carry forward, but because of the proof it affords of the fine spirit which animates the leaders of this great community.

To raise \$250,000 in twelve days on top of \$800,000 previously raised within two years was no light task. It had been accomplished in a splendid way by intelligent team work and by making known to the whole city the great value in manhood which must accrue from widely extending the system of gymnasiums, reading rooms, dormitories, and general educational advantages furnished by the Y. M. C. A. Thus Chicago has established another world record which is greatly to its credit.

Well-trained and self-respecting young manhood is a priceless asset to the city and the country. Chicago may well rejoice that the way has been prepared for so much valuable work in conserving and strengthening the characters, building up the physical condition, and educating the minds of its young men.

Canadian Club President

Toronto, April 26.—John F. Mackay, business manager and treasurer of the Toronto Globe yesterday was elected president of the Canadian club.

Enjoy Your Meals

By Simply Eating a Little Pleasant Tablet After Each of Them.

A Tablet Digests a Meal. Trial Package Free.

When digestion is perfect the fluids necessary to this process come naturally to the aid of the stomach. These are of right proportion and do their work speedily and well. When indigestion and dyspepsia are prevalent, these same fluids come slowly if at all, are weak and insufficient or are filled with strong acids and alkalies. When such a condition exists each meal is a hardship upon the digestive organs. The meal should strengthen the juices, but on the contrary it weakens them, so that man by the very act of eating causes conditions to arise which of themselves bring him pain and longing for the next meal.

By eating one of Stuart's Dyspepsia Tablets you mix the tablet with your saliva and it goes into your stomach as a strong, vigorous fluid, many times more powerful than the natural digestive juices. These tablets are made up from natural vegetable and fruit juices and are composed from Hydrastis, Golden Seal, Lactose, Nix, Asafoetida and Jamaica Ginger. There is the formula and one grain of it will digest 3,000 grains of food in any stomach. Beside digesting the food it will give the blood the power to enrich the digestive fluids so after a time nature will take care of itself. Though you have no stomach trouble one of these tablets after each meal is a powerful assistance to nature and is an excellent habit to make.

To be sure to digest and ask this opinion of Stuart's Dyspepsia Tablets. We will abide his answer if he be an honest man. They sell for 50c per package. Send us your name and address and we will send you a trial package by mail free. Address: F. A. Stuart Co., 150 Stuart Bldg., Marshall, Mich.

UNIVERSITY BUILDING WILL COST ABOUT \$600,000

Regina, April 26.—The tender of Smith Bros. & Wilson, contractors, Regina, for the erection of five of the Saskatchewan University buildings at a cost of \$600,000 has been accepted by the Board of Governors and approved by the Provincial Government. This amount does not include heating and ventilation which will be dealt with separately.

The five buildings are: the main college, to cost roughly about \$240,000; students' residence, agricultural engineering building, stock pavilion, power house, tunnels and fire protection system. It is expected that the contractors will commence work at once. The three smaller buildings are to be completed this fall and the college building and students' residence next year.

The buildings will be collegiate Gothic in design, and in the judgment of one competent critic will present as distinguished a specimen of this style of architecture as can be found in the Dominion. Indeed, it will reflect the highest credit on the architects, Brown and Vallance of Montreal.

In the college building, rooms and lavatories are provided for the departments of chemistry, physics, biology, animal husbandry, field astronomy and dairying, also for library and offices. There is also in this building a large assembly hall capable of seating about 1,000 persons. The hall is designed specially for the large numbers who will attend the conventions and short courses for farmers. The stock pavilion will accommodate from about 200 to 300 head. Over 150 students can be accommodated in the fine new residence when completed.

The agricultural building is to be fitted up with forges and benches for smith and carpentry work, and also will have a place for traction engines and heavy farm machinery of latest kind with class rooms and drafter room attached. This building will be one of the best of its kind in Canada and suitable for a province worth now \$25,000,000 of farm machinery. The power house has been built sufficiently large to accommodate heating, lighting and power plant to serve buildings twice the size of the present in fact, at a very small cost the power could be increased to supply two other buildings as large as the largest one of the present group.

It is intended, when the number of students justify it, to turn over this group of buildings to the College of Agriculture for its exclusive use, and to provide for the arts students in another building. In the preparation of the plans and all arrangements the aim has been to make the buildings suitable and worthy of the work of the college of agriculture. Indeed, two thirds of their cost are properly chargeable to agricultural education.

The government approved of the general determination to erect buildings of a substantial character requiring a small annual expenditure for maintenance, also a small outlay for making interior alterations to adapt the buildings for other purposes. In the opinion of those who examined the plans carefully the structures will be a very superior type and splendidly designed. The feeling of the Board was that the province will have good reason to be well satisfied with them.

Nordica for Suffragettes

(Mme. Nordica in Columbian Magazine)
I believe in the militant suffragettes. When men take the view that to gain an end warlike methods are excusable they are heroes. Many a man has fought and gone to prison for a principle. He is a hero, then, and I think no great reforms have been brought about without there being those willing to cast themselves into a breach and to fight.

The time has come by for women to keep quiet. In the business of life the time has come by when things can be entirely one-sided. There must be a mutual arrangement. And any lady who does not care to "flaunt herself," as it were, in the public eye has only to stay at home and keep quiet.

It is really such a degrading thing for women to go to the polls and vote—let those gulls where our men go to make the lives and the lawmakers of our country are really too debased and wretched to be seen in— isn't it about time that someone take a hand in the matter? Is there any public place in this great country—any meeting place where a woman to go and vote— not fit for a woman to go and vote on the laws which shall govern herself and her children? If so, it is about time that such time be brought up to the level of our churches and those and street cars and thoroughfares, and everywhere that women go. It is time, I say, that the polls come out of the "lough of despond."
