

The type slide has two specimens reared from the eggs of *Tomaspis varia* by Mr. P. Lachmere-Guppy.

There is also a paratypic slide with one specimen with the record "Reared from grass, Verdant Vale, Jan. 30, 1913, and oviposited in frog hopper eggs" (same date). F. W. Urich, collector.

Type Cat. No. 15971. U. S. N. M.

Easily distinguished by the red color and coloring of the veins; *sanguinea* Girault lacks the red in the veins and *neosanguinea* Girault has a white band occupying about one-third of the abdomen, and the basal joint of the club is at the second.

The species is named in honor of Mr. A. A. Girault who has done most of the work in this family.

Mr. Lachmere-Guppy writes that "this insect in life is vermilion with jet black eyes, and acts like a mymarid".
