

Embankment, London, W.C. I rather anticipated the secretary's instructions in the matter of the vaccination certificate. He will tell the student where they may be obtained.

The examinations are held four times a year in January, April, July and October. Canadian graduates do not have to try the primary or intermediate, but only the final examination. The final consists of three parts : medicine, surgery and midwifery. The latter may be tried at the end of the fourth year. The three groups may be tried at one time or one group at a time at the end of the fifth year.

The examination in midwifery, including obstetrics and gynaecology, consists of two parts, a written examination and a twenty minute oral examination including the use of instruments. For this examination it is better to read English text-books only, as the English are conservative in these branches. Text books such as Galabin or Playfair on Obstetrics, and Lewers on Gynaecology, will be found to answer the requirements.

Medicine consists of a written examination (two papers), a clinical examination which consists in examination and diagnosis of cases for about half an hour and the writing out in detail of the treatment for a disease mentioned by the examiner, for which ten minutes is allowed ; an oral examination on general medicine, medical pathology, gross and microscopical and lasting twenty minutes.

Medicine includes the following subjects: Practice of Medicine, Clinical Medicine, Therapeutics, Jurisprudence and Toxicology, Sanitary Science, Medical Anatomy, Pathology and Bacteriology.

A question on Therapeutics, Jurisprudence, Sanitary Science and Bacteriology on one of the papers is almost all the attention given to these subjects. The work done at a Canadian Medical College more than covers the ground. The only points that may require looking up are the English legal procedures in Jurisprudence. In the clinical examination typical cases of any of the diseases of the skin or nervous system may be shown.
