FORTY-FIRST YEAR

THE NEWS RECORD

KITCHENER, ONTARIO, SATURDAY, DECEMBER 13th, 1919.

PROBS.
Fresh west to northwest winds,
turning much colder, some light
snowfalls Sunday, fair and
decidedly colder.

16 PAGES. PRICE TWO CENTS.

HIGH EXCHANGE RATE BOOSTS COAL PRICES IN THE WEST

Makes a Difference of Over One Dollar Per Ton.—Dealers Hold
Back Payments Until Exchange Drops.

HIGHER RATE MEANS SERIOUS LOSS FOR DEALERS

Winnipeg, Dec. 12.—The prices on American coal were boosted fifty cents per ton to-day, but by the high rate of American exchange. Coal dealers who previously to this season never paid any higher than 2 per cent. on American exchange, found themselves called upon to-day for over ten per cent. to settle up their accounts with the American coal dealers. This is over one dollar a ton and a boost in price was decided upon.

NO DEFINITE ACCEPTANCE BUT REPLY CONCILIATORY

PARIS EXPECTS SIGNATURE OF PROTOCOL BY CHRISTMAS.

Paris, Dec. 13.—Germany's reply to the Entente notes, relative to the signing of the protocol of peace treaty, does not constitute an acceptance, although couched in conciliatory terms, according to the Echo de Paris. It is said the Allies will have to send a new note, but the belief is expressed that the Berlin government will yield and that the protocol will be signed about Christmas.

ENDORSED FOR MAYOR.

In another column of this issue it will be noticed that Ex-Ald. J. F. McKay has been endorsed as a Labor candidate for Mayor. The Record endeavored to ascertain from Mr. McKay whether he would consent to stand but was not able to get into touch with him.

FAIR ATTENDANCE AND HIGH PRICES

Christmas Market Fixed for December 23.

Saturday's market was fairly well attended and a good amount of produce was on hand.

Poultry was very scarce and sold at good prices, chicken bringing thirty-five cents a lb. and duck and geese the same. Many rabbits were offered, the prevailing price being thirty cents a lb.

Eggs were scarce and brought seventy-five cents and upwards, per dozen. Butter, both Creamery and Dairy, was sixty-eight cents and upwards. Apples were offered in large quantities, selling at from thirty-five to forty cents a small basket.

A good supply of vegetables was on hand, including celery, peas, beans, pumpkins, cabbage, etc. and which greatly exceeded the demand for them.

A few Christmas trees were offered for sale at 50 to 75 cents for small trees and a much as \$5 for big ones.

The Christmas market will be held on Tuesday, December 23rd, commencing at 7 o'clock.

A Ford Smashed.
There was a smash at the corner of Benton and King streets last evening. A Ford car was badly bent and damaged.

Will Reel From Mighty Shock.

According to the predictions of several of the World's greatest forecasters this old world of ours is in for a tremendous time between Dec. 17th and following days. On the above date, they tell us, there will be a grouping of six mighty planets such as has not been seen in a score of centuries. Being grouped together as they will be, they will cause the greatest sunspot of all his cry and the Earth will reel from the hugest storms and volcanic disturbances ever experienced. A careful survey of the situation has been made by Prof. Albert F. Porta. While not wishing to startle the people, he says: "Be warned in advance. Tremendous things are going to happen. The Planets in their orbits swing in great ellipses about the Sun. They are linked to the Sun, and to each other, by chains of electro-magnetic energy whose compelling forces counteract each other and hold each planet in its regular path. Whenever two planets wheel into such position that they pull together on the Sun—either in "conjunction" on the same side of the Sun or in "opposition" with the Sun between them—their united pull causes the Sun's gases to "explode"—to leap out into space in the form of sunspots. These sunspots in turn cause storms on the atmosphere on our Earth—doublets on other planets as well.

Two planets, united, are enough to cause a small sunspot and a small storm. What, will seven cause. We leave that for our readers to judge.

On December 14th, 1919, no less than seven planets will pull jointly on the Sun. These will include the mightiest planets, those with the most powerful pull.

Six of them, Mercury, Mars, Venus, Jupiter, Saturn, and Neptune, will be in conjunction; grouped together in the greatest "League of Planets" ever known in the annals of astronomy. They will be massed in the narrow belt of but 26 degrees, on the same side of the Sun. Directly opposite, facing into opposition with this gigantic League, will be the huge planet Uranus. The magnetic currents between Uranus and the six planets will pull the Sun like a mighty spear. Our Earth is outside the League at a angle of nearly 90 degrees—in perfect position to receive almost the full force of the monster electrical disturbance as it leaps into activity on what will be the eastern horizon of the Sun's disk. What the outcome will be, no one knows and December 17th will be looked forward to with anxiety. There is one consolation, Haley's Comet was looked upon to create terrific havoc but nothing occurred. Here's hoping the same may be the result on the above date.

FAIR SEX APPEAL TO GOVERNMENT

Many Reforms Suggested.—Women as Movie Censors.

TORONTO, Dec. 13.—Appeals for a number of reforms were made to Premier Drury by a delegation representing the "National Council of Women."

Among the things asked for were: Co-guardianship of children by mothers and fathers; mothers' allowances, and consideration for the deserted wife and the unmarried mother; minimum wage law for women workers; minimum salary for school teachers; more rigid censorship of moving picture films.

In regard to moving pictures, a request was made that permission be given for the showing of the film "The End of the Road" for educational purposes. Attention was called to the fact that this film had been endorsed by the association for combating diseases and the women's institutes.

Hon. Peter Smith said he had seen the film and had not passed it because it was not such a film as he would wish his own girls and boys to see, but he was willing to let it through now, through the board of health, to selected audiences, mostly parents.

"Women," he said, "are going to be put on the censorship board. It may be that there will be two boards because there is too much for one board to do. I have a woman in view now. I want a good broad-minded woman who can see the funny side of life and also the serious side of life."

LIQUOR STOLEN BY WHOLESALE

Brings \$16 a Quart in Detroit.

Windsor, Dec. 13.—At least five bonded cars containing liquor have been "tapped" in or around the G. T. R. yards here within the past few weeks. Most of this booty has most likely been smuggled across the river to Detroit.

At the prevailing price of \$16 a quart whisky smugglers are said to be making a handsome profit and where the liquor is stolen by the case, as has been the method adopted by the freight car thieves, the monetary return runs well into the thousands.

A well-known redoubt in Sandwich is said to be the Canadian oasis where "supplies" are obtained. This place was watched two days by revenue officers and evidence secured to remove the place from the list of thieves, the monetary return runs well into the thousands.

The Provincial Health authorities have the most complete endorsement of the Government. If the city council on Monday does not pass the order making vaccination compulsory, the courts will be asked for a mandamus forcing the council's hand on Tuesday. All the legal machinery is ready for that move. But there is no intention at present to quarantine the whole city of Toronto.

The position of the Ontario Health Department is that the situation in Toronto is very dangerous, that smallpox has been epidemic for more than a month, that more than 1200 cases have developed and that there is not a sign of the epidemic abating. Unless the city carries out the law, it will become liable for damages and bring on itself a multitude of lawsuits.

75 PERCENT. OF MINERS AT WORK

Removal of Restrictions as Circumstances Warrant.

GARFIELD HAS RESIGNED

WASHINGTON, Dec. 13.—Regional Directors of Railroads are authorized to remove restrictions on the use of light, heat and power derived from coal as soon as the fuel situation warrants; also to restore train service curtailed to meet the coal shortage as soon as the fuel supply justifies.

From 65 to 70 per cent. of the miners have gone back to work. In Indiana nearly all the men returned, but elsewhere a good deal of delay is being shown.

Fuel Administrator Garfield's resignation sent to President Wilson will most likely be accepted. The work of the Fuel Administration may be transferred to the Railroad Administration. Dr. Garfield refused to discuss the matter.

XMAS TURKEYS BEYOND REACH

EGGS REMAIN AT \$1.25

(Special to the Record).

TORONTO, Dec. 13.—Christmas turkey has again established himself as the aristocrat of birds. At the St. Lawrence market this morning he demonstrated his superiority by pipping his value at a price which the average citizen would have considered beyond reach.

This morning the finest were going at 60 cents a pound. One vendor had an exceptionally fine bird and asked just \$6.05 for it. It weighed about 11 pounds.

The farmers reported egg production on the increase, still they were asking as high as \$1.25 for a dozen. They consider that at that figure they are still losing money, but with greater production prices are sure to drop.

WILL ACCEPT SOME RESERVATIONS

PARIS, Dec. 13.—As the result of conferences by Premier Clemenceau and Lloyd George, the United States will be asked to accept in order to facilitate a compromise between the adverse parties in the American Senate, the Allies are willing to accept to at least an extent as possible some of the reservations to the treaty made by foreign relations committee. It is said the Allies will do everything in order that America may participate in future conferences.

TO THE UNION GOVERNMENT.—Hon. John B. M. Baxter, Attorney-General of New Brunswick, who may join the Dominion Government, filling the representation of that Province vacated by the retirement of Hon. F. B. Carvell.

TAKE ENERGY FROM MATTER AND SAVE COAL

London, Dec. 13.—Sir Oliver Lodge has told Royal Society of Arts the time will come when atomic energy will supersede coal as the source of power.

Sir Oliver said: "The radium atom, firing off a particle which turns out to be a positive charged atom of helium, is like a two-ton gun firing a hundred-pound shot. Before it has exhausted its ammunition it fires off five such projectiles, and then settles down into a quieter existence as lead or something chemically indistinguishable from that substance."

"I think we are on the brink of a discovery. It may take a century, but I do not suppose our descendants will be using chemical energy. Instead of burning 1,000 tons of coal they will take energy out of an ounce or two of matter."

Sir Charles Parsons, who presided, said that engineers saw clearly that the power of the atom was a new matter which is far richer than radium and which he calls "Canadium." The discovery is the most important that had been made in general and through it can be determined the origin and basic material of all matter. The discovery, he claims, will also explain many things hitherto unsolved in connection with meteorographical work and the basic matter from which metals of all kinds are formed.

After making the discovery he communicated with McGill University and he is of the opinion that this was forwarded to England and that his discovery was the one which has now been accredited to Sir Ernest Rutherford. He states that he is willing to prove on any occasion that his discovery is genuine and that it was before that of any other scientific man.

EXPECT 2000 ARRESTS

New York, Dec. 13.—No fewer than 2,000 arrests are expected by the Sinn Féin by the end of this week. The "clean-up" movement in Ireland, it is thought every Sinn Féin leader will be jailed or deported.

CANADIAN CLAIMS CREDIT FOR NEW SCIENTIFIC FIND

(Special to the Record).
MONTREAL, Dec. 13.—Dr. Romeo Ledue, of Marieville, Que., claims that he is the first to discover the process of the transmutation of metals. He states that Sir Ernest Rutherford is getting the credit to which he (Dr. Ledue) is entitled.

On Nov. 7th, when experimenting with feldspar and potassium, almost accidentally he discovered a new matter which is far richer than radium and which he calls "Canadium." The discovery is the most important that had been made in general and through it can be determined the origin and basic material of all matter. The discovery, he claims, will also explain many things hitherto unsolved in connection with meteorographical work and the basic matter from which metals of all kinds are formed.

After making the discovery he communicated with McGill University and he is of the opinion that this was forwarded to England and that his discovery was the one which has now been accredited to Sir Ernest Rutherford. He states that he is willing to prove on any occasion that his discovery is genuine and that it was before that of any other scientific man.

Car Off Track.
Last night the Preston Car due here about 10 o'clock got off the track at the switch at the car-barns. The front trucks kept to the main line while the rear wheels attempted to take the siding. Traffic was delayed only a few minutes and passengers were caused very little inconvenience.

Have Returned.
The local delegates to the Hydro conference with Premier Drury in Toronto yesterday have returned. A reference to the Toronto meeting will be found elsewhere in this issue.

OFFICIAL COURSE.

The 10 o'clock Grand River Railway car got mired on the rails this morning. The back and front ends, pulled in different directions, the wheels of the front truck took to the main line while the back wheels got on to the siding. No damage resulted.

FEWER NEW CASES

TORONTO, Dec. 13.—The report of the smallpox situation in Toronto during the past 24 hours is the most favorable that has been received in several weeks. There were only 26 cases while 39 patients were discharged as cured.

SARNIA GETS STEEL PLANT

GODERICH PLANS ABANDONED

Sarnia, Dec. 13.—The announcement that a huge steel trust would locate in Sarnia has caused a lively real estate boom there.

Following the vote of the Sarnia Indians to dispose of 1,184 acres of their land along the St. Clair River front for the sum of \$200,000, it is announced that preparations were now well under way to build a \$15,000,000 steel plant in Sarnia alongside the property owned by the Willis-Lee Auto Corporation interests.

The officials of the new company state that this step means the dropping of the efforts so far as Goderich is concerned. The corporation will abandon all plans made in Goderich.

COUGH UP FOR COUGH DROPS

Ottawa, Dec. 13.—"Cough drops," tablets sold for the relief of coughs, sore throats, etc., are a medicine, despite the fact that they are sometimes sold in bulk the same as candy, according to the ruling of the Inland Revenue Department, and as such must bear the correct amount of war tax stamps upon each package sold. Other articles, such as camouflaged chalk, come under a similar ruling.

The attention of druggists has been called to this ruling by a commercial traveller during the week, and in some cases they are said to have expressed surprise, as some of them had been treating the "cough drops" sold in bulk as candy.

This is not a new ruling of the department. On November 1, 1917, twenty thousand copies of a pamphlet were distributed among all the known druggists in Canada, and four pages six of that pamphlet it was stated that "cough drops" and other similar medicated articles were classed as patent medicines, and as such were subject to the war tax.

The plant has three distinct processes: (a) The separation of Sodium Sulphate from the crude salt cake, giving certain by-products such as magnesium carbonate. (b) The separation of Magnesium Sulphate from the crude salt obtained by evaporating the lake water, with the production of the by-product Sodium Sulphate. (c) The treatment of the accumulated mother liquors from (b) and (a), obtaining such salts as Potassium, Chloride, Sulphate, and Nitrate.

Throughout the plant are steam dissolving vessels, labor saving conveying apparatus, centrifugal wringers and drying ovens. So convenient is everything laid out that there is

WHO IS OWNER OF DIAMONDS?

London, Dec. 13.—An extraordinary story, involving the romantic recovery of diamonds valued at about £30,000, which were saved after the sinking of the Lusitania, will be brought before the Postmaster-General in the House of Commons.

On May 11, 1915, four days after the Lusitania was sunk, John Hayes, the Captain of a fishing boat, found a postal packet floating on the sea about ten miles to the south of High Island, near Clondroon, county Cork. In the postal packet were three registered parcels, which contained diamonds. These eventually reached the postal officials in London.

The diamonds had been sent on the Lusitania by a firm in New York, but it has not been found possible for the salvagers to discover the consignees, and the firm in New York to whom the diamonds were returned refused to accept delivery.

The salvagers received a letter from a firm of solicitors in London saying the package contained diamonds, and though the man who found them gave evidence before the American Consul, only his expenses were paid.

TILLSONBURG PAPERS UNITE

Tillsonburg, Dec. 12.—Negotiations were closed to-day for the amalgamation of the two local newspapers, the Liberal and The Observer. A joint stock company has been formed, which will take over both papers and begin publication of The Tillsonburg News on December 26.

TORONTO MEN ARE MARKED MEN

If You Live in Toronto, Don't Try to Get to Montreal.

SPECIAL COLOR FOR TORONTO

(Special to the Record).
Montreal, Que., Dec. 13.—There's no chance for a Toronto man in these parts unless he is vaccinated. It is easier for a camel to pass through the eye of a needle than for an unvaccinated Torontonian to arrive in Montreal, say the City Hall health officials. The thing can't be done, that's all. The passengers on showing their certificates on the train to the conductor is given a little slip, which he surrenders on reaching his destination. These slips vary in color. Now there is a special color to represent Toronto.

The innocent wayfarer from that, at present, afflicted city is often vastly astonished to be accosted at Colonne or Vaudreuil by a stranger who seems to know a lot of things about him. For instance that he comes from Toronto. He marvels at the persistence of the vaccination inspector, and perhaps believes him gifted with second sight.

But it is very simply after all. In his hat is a little slip in a certain color, and the color announces to the world that the holder of the slip is from Toronto. The inspector can go through an entire train and without any difficulty pick out all those who come from the smallpox area. The particular color for this purpose is not for publication. Toronto might not like it. Some 25 people were vaccinated at stations yesterday.

SEAT FOR RANBY.

Toronto, Dec. 13.—It is said that Rev. Edgar Watson, U.F.O. member-elect, for North Victoria, has offered his seat in the Legislature to Hon. W. E. Ranby.

NEW INDUSTRY IN KITCHENER TO SUPPLY CANADIAN TRADE

Potash and Salts Co. Has Established Large Plant With Good Equipment.

In the fall of 1913, Messrs. W. G. Weichel, Waterloo, Mr. Jacob Klotz, and Mr. Carl Ide, of Kitchener, and Mr. W. W. Sloan, of Toronto, conceived the idea that the resources of Canada were unlimited, that in the Northwest there were ingredients that if properly nurtured, analysed, and put to use would be a boon to the country. With this end in view they commenced research work and so well did their ideas work out that to-day this city has the proud distinction of being the home of the Potash and Salts Co. of Canada, the largest of its kind in the Dominion.

When the idea was first entertained a visit was made to a lake lying about one-half mile from the little hamlet of Dana, Saskatchewan. This lake which contains about 8 square miles has no inlet nor outlet and is fed by a number of springs. On investigation it was found that the entire lake contained salt ingredients of a most excellent quality, the thickness of the layers running from 10 to 12 inches and only a few inches below the surface of the water.

This was the origin of the company, and in February, 1914, the project was launched. The present refinery on Edward Street speaks well for the enterprise of the gentlemen connected with the company. The News Record representative had the pleasure of being shown through the plant yesterday by Mr. W. G. Weichel, Managing Director and what he saw convinced him that this city is to be congratulated on having in its midst a refinery fully equipped even to the smallest detail.

The plant has three distinct processes: (a) The separation of Sodium Sulphate from the crude salt cake, giving certain by-products such as magnesium carbonate. (b) The separation of Magnesium Sulphate from the crude salt obtained by evaporating the lake water, with the production of the by-product Sodium Sulphate. (c) The treatment of the accumulated mother liquors from (b) and (a), obtaining such salts as Potassium, Chloride, Sulphate, and Nitrate.

Throughout the plant are steam dissolving vessels, labor saving conveying apparatus, centrifugal wringers and drying ovens. So convenient is everything laid out that there is

absolutely no waste of time from the minute the salt cake is taken in from the cars until the finished article is ready for the market. The plant will have a capacity of one hundred to one hundred and fifty tons of refined salts per week.

In speaking about the markets for the commodities manufactured, it was learned that it was unlimited. Up to the time of the Great War, Germany had controlled the Canadian market in Glauber and Epsom Salts, and especially that of Potassium Salts. With the present refinery running to capacity there will be no need to depend on other countries. The company has a bright future ahead of it, as regards capital and shareholders it is a purely Canadian organization in every respect.

It might be interesting to know that the evaporating plant situated at Dana, Sask., has as its superintendent, Mr. Orley Uffelman, son of Mr. and Mrs. Jacob Uffelman of Waterloo, who has a competent staff of men under his control. This plant is equipped with the "Shaw System," considered the finest of its kind in the world. The lake is situated about one-half mile from the Prince Albert branch of the Grand Trunk Pacific and a spur line runs direct to the lake which greatly facilitates the shipping of the crude salt to the refinery in this city. The company have been fortunate in securing the services of Mr. C. W. Hancock, analyst formerly with the British Acetone Co., Toronto, as chemist. A test of the commodities showed them to be 99.72 per cent. pure.

The Board of Directors is as follows: President—A. J. Gough, of the Sellers-Gough Fur Company, Ltd., Toronto. Vice President—W. W. Sloan, Toronto. Secretary—Jacob Klotz, Kitchener. Managing Director—W. G. Weichel, Waterloo. Production Manager—Carl Ide, Kitchener. Chemist—C. W. Hancock, Hamilton.

Directors—A. J. Gough, R. P. Gough, John Seitz, W. G. Weichel, Jacob Klotz, W. W. Sloan and Carl Ide.

SINKING STEAMER ASKS HELP ASSISTANCE MAY BE TOO LATE

Boston, Dec. 13.—A radio message received here to-day said the British steamer Messina was in sinking condition in the North Atlantic and would require boats. The message said it would be impossible to save her. The steamship Maple Leaf, making three knots an hour, is on the way to assist her, but will not reach the Messina for twenty hours.

ARCHBISHOP OF WINNIPEG TO BE MADE CARDINAL

(Special to the Record).
Winnipeg, Dec. 12.—There is great excitement in Winnipeg to-night over the intimation from Rome and Ottawa that at the forthcoming consistory at Rome, Archbishop Sinnott of Winnipeg may be created a Cardinal. Archbishop Sinnott's name has been approved by two former papal delegates to the Dominion, Cardinal Mercier of Montreal and Cardinal S. Barretti. Dr. Sinnott was secretary to the latter during his regime of seven years at Ottawa. He is now returning from Rome.

Winnipeg, Dec. 12.—There is great excitement in Winnipeg to-night over the intimation from Rome and Ottawa that at the forthcoming consistory at Rome, Archbishop Sinnott of Winnipeg may be created a Cardinal. What's What in Labor Circles By "Rufus"

Organized Labor will solidly support the Hydro-Radial Bypass at New Years.

Labor men already endorsed for New Years elections are: Mr. J.F. MacKay for Mayor, Messrs. Halliwell, Plummer, Massel and White for Alderman and Mr. John Hainsworth for the Water Commission. Others will be coming along in a few days.

The labor movement does not lack for men who can paint out the promise of the future. Fortunately it also contains some who remember and respect the lessons of the past.

Instead of abolishing the Water Commission, Labor Party advocates all public utilities to be put under one commission thereby saving considerable overhead expenses and office upkeep.

Another plank in labor's platform is—Publication of assessment rolls at least every three years. Who will be first to say No?

Waterloo Labor Club are finding recreation and a little financial help.

for electioneering funds, in a series of "Old Time Dances" in the large hall of the Club.

The union labor tends to make strikes unnecessary by making compromise with union conditions an advantage to business.

All the labor men who visited the "Star Theatre" on Thursday evening last, quite agreed with the lesson of the story, that violence and oppression are useless and unnecessary. We are still wondering why some employers and governments are so anxious, at the time of a labor movement, to bring out soldiers and machine guns.

Hon. Walter Kello stated to a deputation from Niagara Falls, that the Government intend to back up the Housing Act. Among other things he said—"I do not consider the money as being spent by the province, but merely loaned, and we will get it back."

Reconstruction must be founded upon industry. Employment of men merely to give them something to do without producing things that will be useful or without adding to the world's wealth, is wasteful.
