31 Sat.	8	38	49	2 13	1 41	36	50	38	50	to end fine.

PLANETS IN OCTOBER.—The Moon is a few degrees South of the ruddy Mars on Oct. 3rd, and ere becoming "New" she passes the place of Jupiter on the 6th. The New Moon is in conjunction with the beautiful Venus on the 11th, the latter planet being at Aphelion—farthest from the Sun—on the 16th. Mercury is behind the Sun on the 16th, and is an "Evening Star" for the rest of the month. The slow moving Saturn is at Perihelion—nearest the Sun—on the 19th, and "Stationary amongst the Stars" on the 20th. The Moon passes near him on the 28th.
