Oxy-Acetylene Welding and Cutting

Welding all seams, flanges and nipples by Prest-O Lite Process at a great saving in cost.

Leak-Proof Tanks Cost Less to Make

This illustration shows one of a series of welded tanks, used by a large manufacturing company to contain a searching chemical liquid. Conclusive tests proved the tanks positively leak-proof. They cost much less to make by welding than by any other method.

In thousands of shops and factories the Prest-O-Lite Process of oxy-acetylene welding is displacing the rivet, bolt and threaded joint. The result is neater, stronger work and reduced cost.

For routine construction work, or "on-the-spot" repairing, the Prest-O-Lite Process is unequalled.

Prest-O-Lite PROCESS

employs both gases (acetylene and oxygen) in portable cylinders. Prest-O-Lite service, which insures prompt exchange of full cylinders for empty ones, provides dry, purified gas, insuring better welds, quicker work and lower operating cost.

Apparatus consists of an equal pressure blow-pipe, automatic regulators and gauges, and all necessary equipment. Adaptable for oxy-acetylene cutting by the addition of special cutting blow-pipe.

Thorough instructions are furnished free to every user of Prest-O-Lite Dissolved Acetylene. Any average workman who understands metals can learn the welding process quickly and easily.

We will gladly send illustrated literature and interesting data showing actual instances of savings made by others. It may suggest valuable ideas to you. Write for it.
