

# In the Manufacture of Wampole's Pulverous Pills

No excipient of any kind is used—they contain the ingredients in the form of a fine DRY POWDER enclosed within a thin and freely soluble coating. Contrast these features with the MASS PILLS—relics of ancient pharmacy.

In the manufacture of the latter excipients must of necessity be used—these excipients, in by far the majority of cases, consist of some viscid and heavy substance, such as Glucose, Syrup, Glycerine or Gums. Such excipients WEIGH SOMETHING, but the pills in which they are used are rarely, if ever, made proportionately heavier—they are, therefore, NOT ACCURATE.

## Wampole's Pulverous Pills Are Accurate.

We want anybody and everybody to verify our claims by chemical and physiological tests—we do not care which.

You only have to ask for samples to receive them. Allow us to submit quotations on your private formulae.

Our consistent prices will astonish you.
