

What an Oxford Gas Range will do for you

A GAS RANGE used to be a make-shift for the warm days. You put up with its shortcomings because of the relief it gave you from the heat of a coal fire, the heavy work of a coal range and the dirt of the ashes.

Any gas range is a relief from this drudgery. But the Oxford Gas Range is a wonder of efficiency.

It bakes, roasts, broils—cooks a large dinner in a most satisfactory manner with the least possible work and worry.

The Oxford oven has an extra corrugated steel lining and air space at the back, and is lined throughout with asbestos mill-board. You thus get the full benefit of all the heat generated, none is lost. The oven is scientifically ventilated so that the fumes of the cooking and all excess moisture are drawn up the chimney.

The oven racks are of pressed steel, practically unbreakable.

A cover plate in the bottom of the oven permits of the examination of the burners, which may be removed for cleaning.

The drop oven door has balance springs which permit its being left open at any angle.

When fully open the door forms a strong, firm shelf on which the pan may rest while inspecting pastry or basting a roast.

The Oxford Range is fitted with our new adjustable gas valve which accommodates any pressure of gas. This valve regulates the flow of gas so that none is wasted and the proper proportion of air is burned.

The top of the stove is flush so a heavy pot may easily be slid on or off the fire. Each range is equipped with giant and simmering burners.

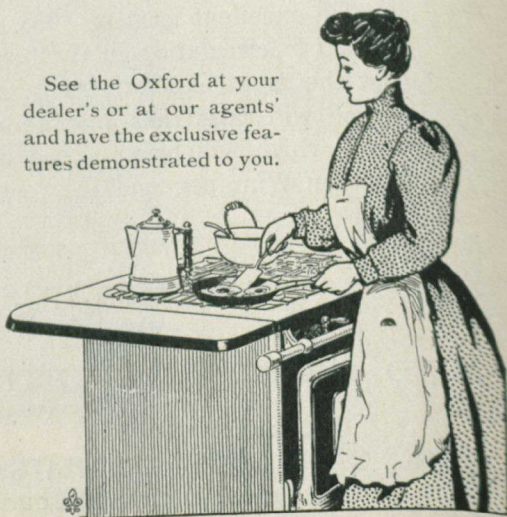

For economy, comfort and perfect cooking you should have a gas range, and the best on the market—the Oxford Gas Range—doesn't cost any more than the other kinds.

This Oxford Range is also made suitable for the use of natural gas. It includes all the good points of the Oxford artificial Gas Range and many exclusive features which make it a most perfect

baker, roaster and broiler.
