For distance of six miles there is a fall of 305 ft., divided over that space by a succession of cascades and currents developing a power of 120,000 horse-power at the lowest stage of the water in the dry season, or about twelve times as much power as at the city of Lowell in the United States.

Abstract taken from C. Legge's, Esq., C.E., and Wm. Walsburg, Esq., C.E., report on the water power at St. Jerome.
