Repairs.

We keep a large and complete assortment of Repairs always on hand. We repair all kinds and makes of Threshing Machines and Agricultural Implements. Orders for Repairs either by mail or telegraph will receive prompt attention and goods forwarded by first express leaving. Our facilities for shipping are unequalled, as there are trains leaving Stratford for the north, south, east and west, all hours of the day.

CAUTION.—You will save time and money by being careful that you get Genuine Repairs for your machines. Various persons throughout the country are making repairs for our Threshers from patterns from our castings. They are made of poor, inferior iron, and are necessarily imperfect. Don't buy them, they injure you, and also injure the reputation of our machines.

Directions for Ordering Repairs.

In ordering Repairs describe the articles wanted, as they are named in this price list. Give plain directions how and where to send the Repairs. Give your Name and Post Office. Give width of Cylinder and say whether Steam or Horse Power.
