### PULP WORKS AT SWANSON BAY

IMPORTANT CONTRACTS HAVE BEEN AWARDED

Nearly One Hundred Men Will Be Put Work Preparing for to Buildings

Vancouver, July 24.—Two important contracts for construction work in paper pulp works at Swanson Bay Company have just been awarded, on for the excavation and concrete we on the pulp mill buildings and the other for the construction of a power plant. The former contract went to the B. C. General Contract Company of Vancouver, and the latter to Messrs. Elliot & McCallum, also of this city The B. C. General Contract Company

will, within a few days, send a force of 75 or 100 men north to Swanson Bay to start work. The contract of to which they are to be put, are to be

water, is to be started right away by Messrs. Elliot & McCallum. The senior partner of this firm was foremen of construction when the big dam of the Vancouver Power Company was built several years ago just below Lake Buntzen on the north arm of Burrard Inlet about fifteen miles from Vancou-

Besides building the dam this firm will lay the pipe line from the dam, a distance of 1,000 feet, to the large sawmill of the company, which has already been completed and in which machin-ery is now being installed.

The plant at the start of operations vill have a capacity of from 25 to 40 tons of pulp per day, and for its operation, power will be secured from three Pelton water wheels. One wheel will be placed in the sawmill, another in the wood preparing plant which is to be housed in a building to be erected adjoining the sawmill and the third will operate the light and power plant. These three wheels will draw their water from the pipe line running from the dam to the mill. A head of 120 feet of water will be available on the ompletion of the dam across Swanson reek. All raw material is to be handled and transported from point to point and building to building by power conveyors.

The output of the pulp mill will be largely placed in the Japanese market at the outset, according to Mr. J. M. Mackinnon, resident manager of the company. According to quality the value of wood pulp runs from \$60 to \$75 per ton. As all buildings and equipnent in the Swanson Bay plant are esigned and located so that the output may be doubled, it is probably only a question of a short time when from 50 to 80 tons of pulp will be produced daily. Mr. T. T. Whittier, the company's engineer, is at present in Van-
