"(2) Cattle which have re-acted to the tuberculin test shall be deemed to be affected with tuberculosis, and shall be permanently marked, in such manner as the Veterinary Director General may, from time to time prescribe.

"(3) Cattle which have re-acted to the tuberculin test, shall not be permitted to be exported from the Dominion of Canada."

"Cattle six months old or over imported from countries other than the United States and Mexico shall not be discharged from quarantine until they have been submitted to the tuberculin test by the Superintendent of the quarantine or other duly authorized officer.

"Cattle reacting to the tuberculin test, but not showing clinical symptoms, shall be permanently marked in the right ear with the letter 'T' by the officer making the test, and then may be released at the expiry of the prescribed period of quarantine if found free from all other infectious and contagious diseases.

"Cattle showing clinical symptoms of tuberculosis shall be destroyed or otherwise disposed of as the Minister may direct.

"Cattle for breeding purposes and milk production six months old or over, if unaccompanied by a satisfactory tuberculin test chart signed by a veterinarian of the United States Bureau of Animal Industry, must be detained in quarantine for one week or such other period as may be deemed necessary and subjected to the tuberculin test; cattle reacting thereto must be returned to the United States or slaughtered without compensation.

"Importers may be required to furnish a statutory declaration that the chart produced applies to the cattle it purports to describe and no other."

To enable exporters to comply with that portion of the United States Regulations printed below, the Department will, on receiving not less than one week's notice, arrange for the testing of tuberculin, by one of its regular salaried inspectors, of Canadian animals about to be exported to that country.

"A certificate for cattle over six months old for breeding purposes and for milch cows must also show that they have been submitted to the tuberculin test by a Canadian official veterinarian or an inspector of the Bureau of Animal Industry, and found free from tuberculosis, giving the date and place of testing, with a chart of reaction, and a description of the cattle, with age and markings.

"All cattle imported for breeding, milk production, grazing, or feeding, when not accompanied by the required affidavits, must be detained in quarantine for one week, at the expense of the owner or importer, under the supervision of the inspector in charge. During this detention a rigid inspection will be made, and cattle over six months old for breeding and milk production will be tested with tuberculin. Animals found free from disease at the end of that period will be released."

CONDITIONS UNDER WHICH TUBERCULIN IS SUPPLIED.

The Department does not test any cattle for tuberculosis, except those imported and exported for breeding purposes, and such herds as are placed entirely under the control and supervision of the officers.

If any owner of cattle desires to have his animals tested, and will send in to the Department the number of doses required, and the name of any reputable qualified veterinary surgeon whom he wishes to employ to do the work, the latter will be furnished free with sufficient tuberculin, on condition that he reports to the Department the result of the test on charts which are supplied for that purpose.

The Department does not order the slaughter of tuberculous animals, and consequently no compensation is or can be paid.

It must be distinctly understood that the remuneration of the veterinarian making the test is to be paid by the owner of the animals and not by the Department.

To obtain the normal temperature of the animal to be tested, at least four temperatures, three hours apart, should be taken on the day the tuberculin is to be injected.

The requisite dose should be injected under the skin with a hypodermic

Bone Spavin

No matter how old the blemish, how lame the horse, or how many doctors have tried and failed, use

Fleming's Spavin and Ringbone Paste

Use it under our guarantee—your money refunded if it doesn't make the horse go sound. Most cases cured by a single 45-minute application—occasionally two required. Cures Bone Spavin, Ringbone and Sidebone, new and old cases alike. Write for detailed information and a free copy of Fleming's Vest-Pocket Veterinary Adviser.

Ninety-six pages, durably bound, indexed and illustrated. Covers over one hundred veterinary subjects. Read this book before you treat any kind of lameness in horses.
