Oil Cheaper Than Coal.

The high price of coal and the prospects of it becoming dearer still has resulted in a big demand for oil fuel. It is now cheaper to use oil fuel in ships and factories than it is to use coal. Perhaps before long we shall be using it in our homes, too.

The great coal strikes of 1911 and 1912 made hundreds of big firms turn towards oil, and it is a remarkable fact that once oil fuel has been used coal is abandoned forever.

Oil is not only cheaper than coal, but it is cleaner and less trouble. It is ever so much easier to transport and to supply to engines. A few feet of tubing and a main line express engine, for example, can take in 600 gallons of oil fuel in from four to five minutes. Oil, too, has the advantage that there are so many big deposits of it in various parts of the world that it is not affected by strikes so much as coal.

When proper oil-burning machines are used, there is no smoke attached to it at all, and factories using oil have no tall chimneys, no piles of ashes, no tedious shovelling of coal into the furnace. Just a few pipes, that's all. A few taps regulate the oil supply to the boiler furnace, and, in fact, with oil the grimy coal stokers can be replaced by girls in spotless white caps and aprons.

Happy Occasion.

Mother—What's the matter, darling?

Child—P-p-pa hit his finger with the hammer.

Mother—Don't cry about that; you should laugh.

Child—I-I-d-did.
