

ZAM-BUK

Is the best remedy known for sunburn, heat rashes, eczema, sore feet, stings and blisters. A skin food!

LAST WILL AND TESTAMENT

The following is a copy of the Last Will and Testament of the Graduating Class of 1917 written by Miss Isabel McBeath.

We, the graduating class of 1917, being in a sound state of both body and mind and knowing that we are about to leave this school, do hereby give and bequeath to our fellow classmates of Grade X the future Grade XI certain of our marked characteristics and most prized belongings, with best wishes for their future enjoyment.

Hazel Quinn, "our spike," bestows her wonderful flitting powers, the tales of which have provided us with amusement, when algebra problems and geometry exercises became to dull and tiresome.

Claire Mowat, being afflicted with unusual studiousness for a maiden of such tender years, bequeaths to Ina Currie, one half of this said studiousness and the other half to Leah McCallum.

John Adams, the foremost of our shining stars, leaves to Amanda Quinn his powerful mathematical abilities and Roy McLean his great failing of interrupting the class when they are in the midst of a very perplexing problem. He trusts that Roy will eagerly follow his example.

Ruth Young being of quite a poetic nature and quite popular with certain P. E. Island swains, bequeaths to Audrey McKenzie all the poetry and love letters received while in Grade XI and we hope that Audrey will take them in as "matter of fact" a manner as Ruth has. The said Ruth Young leaves to Evan Kean, all the pins and compasses which she has used during the past year to prod those who are reading such heavy literature as "Paradise Lost" and the "Merchant of Venice."

Florence LeBlanc another of our shining stars leaves her ready gift of conversation and her art of conversing across the aisles, especially during school hours to Beattie Baird.

Isabel Currie, who has so ably instructed us in the tripping of the light fantastic! resigns the honor of representing the famous Mrs. Vernon Castle to Georgie McDonald who, having done her share, might transfer it to Edna Farrer.

Raymond Andrew bequeaths to Lawrence Fitzmaurice, his unbounded popularity with certain young ladies of the teaching staff. The said Lawrence Fitzmaurice, being an expert chauffeur will, we think very much appreciate this bequest.

Jean Young, our famous hair dresser, leaves Isabel McBeath the task of arranging the coiffures of the young ladies in Grade X and hopes that Isabel will be able to manufacture as many beauties next year in Grade XI as she has done during the past year. Jean also bequeaths to Frances McPherson her great interest in the corner grocery but warns Frances not to eat too much ice-cream or candy or she will ruin her profits.

Ethel Baird bequeaths her stately and dignified manners and walk to Dorothy Haines but hopes that Dorothy will not walk into the room as late as she has often done.

Jessie Ferguson wishes to bestow on Estella Bruce her art of reaching the station in spite of any obstacles that may arise whenever a troop train is expected. She also leaves Estella the readiness with which she bestows smiles on our Canadian soldier's.

We, the girls of this graduating class, knowing that we will not need the mirror in the door of our classroom any longer, leave our share of it to Nan Wetmore for altho' we know Nan has already taken possession we think she can use it to better advantage than ever before.

To Mr. Carr we extend regrets for the many pranks and dices committed by us during the past two years. We have been an annoying class but we fear that with advent of the present Grade X his troubles will be by

GREATER PRODUCTION MAKING PROGRESS

Many Young Ladies Taking up the Work—Canning Methods Taught

The campaign for greater production carried on by the Education Department is progressing well throughout the province. Already fifty or more centres have organizations established among the girls, and each girl who has enlisted in this has promised to can or otherwise preserve at least twenty-five quarts of food materials during 1917. About 1000 girls have already enlisted and the enlistments are being added to every day.

The ladies of the women's institutes and other organizations through the province are rendering invaluable service in the encouragement they give to the girls in this movement, and the actual assistance they offer in the organizing and conducting of the work.

The thirty domestic science teachers who in the month of June volunteered to give a part of their vacation, without any remuneration, to help in the methods of canning and preserving, met from July 10th to the 14th at Ladies' College, Sackville, to review the latest methods and to definitely outline their programme among the girls' clubs. They received very material help from Miss Nita Nixon, of the Ontario Agricultural College at Guelph, Ontario, the representative of the Hon. W. J. Hanna, Food Controller for Canada. They carried on practical work in canning, drying and other methods of preservation, and lectures and talks were given on methods of economy, proper food values, and means of conserving the food supply in war time.

While in Sackville, the localities in the province where clubs are formed were portioned out to these teachers, and they will visit them spending several days with each club, sometime during the next month. It is expected that they will be able to serve about 100 localities during the Campaign which they have planned. The names and address of the teachers who have thus volunteered for the service of the country are as follows:

Helen Jackson, 302 George St. Fredericton, N. B.; Rose H. Hoffman, Chatham, N. B.; Jane B. Peacock, Bayfield, N. B.; Lila A. White, St. Martins, N. B.; Laura B. Perley, Fredericton, N. B. (R. R. No. 2); Charabel O'Brien, Moncton, N. B.; Ethel E. Swanson, Douglastown, N. B.; Dorrit McCully, Botsford, St. Moncton, N. B.; Katherine R. Bartlett, St. John, N. B.; Mabel K. Smith, Hampton Station, N. B.; Elizabeth Nutter, Fredericton, N. B.; Eleanor M. Roach, Sussex, N. B.; Mary L. McAllister, Sackville, N. B.; Violet M. Knapp, Sackville, N. B.; Mary Howard, Woodstock, N. B.; Sue C. Prescott, Albert, N. B.; Hazel L. Alward, 49 Princess St. Moncton, N. B.; Emma Read, Sackville, N. B.; Pearl Akerley, Norton, N. B.; Ida Northrup, Kingston, N. B.; Harriet Gowan, St. Stephen, N. B.; Nita Nixon, Guelph, Ont.; Carolyn A. Currie, Fredericton, N. B.; M. Althea Wathen, Harcourt, N. B.; Vera M. Wilson, Chatham, N. B.; Marjorie F. Lewelling, Perry's Point, N. B.; Margaret F. Burgess, Hampstead, N. B.; Myrtle E. Ganong, St. Stephen, N. B.; Kathleen Stueves, Hillsborough, N. B.; Gladys Borden, Sackville, N. B.

A SOFT SHOCK
A young farmer assisted at a recent wedding, lending his motor car and driving the guests to and from the church. On one journey the car skidded and backed into a milk float containing an old man and woman on their way to market with their produce. The impact jerked them backwards off their seat into the bottom of the cart, but appeared to have done no further damage.

The next morning the farmer received the following bill:
"To three-score eggs I sat on.
"To twelve pounds of butter my husband sat on."

"Knowing you to be a kind gentleman, perhaps you will allow us something for shocks."

QUESTION OF OWNERSHIP
A well-known shopkeeper recently lent his grandson enough money to purchase a motorcycle. The money was to be paid back in instalments, the machine the property of the grand father until the last payment had been made.

The other day while out riding, the boy met his grandfather and jumped off his motor-cycle. "Say, Grandfather," said the boy, "who does this machine belong to?"
"It belongs to me until you have made the last payment. That was the agreement, you know. But why do you ask?"

"Well, I just wanted to make sure, remarked the boy, with a grin. "Your motor-cycle needs a new tire."

No means at an end. We also leave with our best wishes for his continued success.

Signed on behalf of the class, this 29th day of June A. D. 1917.
ISABEL D. McBEATH.

LIBERAL CAUCUS WAR POLICY

Stand by Allies Until the Final and Complete Victory is Won

Ottawa, July 19.—At the conclusion of the meeting of Liberals, who supported the Military Service Act, the following resolution was adopted and given out for publication.

1. That Canada's part in the war must continue to absorb the best energies of the country till a final and complete victory of the Allies is achieved. This view is especially dear to all Liberals who from time immemorial have fought for democracy against autocracy and for the national and self-governing rights of the small people. Canada's own future safety is absolutely involved in such a fight.

2.—That we record our unbounded admiration of and our undiminished debt to the 400,000 gallant Canadian soldiers and nurses who have offered and in many cases given their lives for the world's freedom.

3.—That we express our appreciation of the splendid patriotic gifts and service by which our people at home—men, women and children have done their utmost to emulate the example of their sons and brothers in the trenches.

(4)—That we endorse all necessary steps to share the required number of men to fill the gaps in the Canadian regiments without delay, as anything short of this amounts to betrayal of the living and the dead.

(5)—That the organization of the man power of the country must be accompanied by an immediate alteration of our system of taxation to meet war time conditions which will ensure that those who do not fight will pay, and pay in proportion to their ability as has been done in the motherland in other British Dominions in the United States and in other Allied countries.

(6)—That immediate steps be taken to eradicate profiteering in food stuffs, munitions, or other commodities.

It is understood that the question of extension was not considered by the gathering, neither is it believed was the question of political union.

ALGONQUIN PARK

The Highway to Health and Happiness

No better place could be advised for a real holiday for red-blooded men and women than Algonquin Park, situated about 200 miles north of the City of Toronto. It is an unspoiled territory of nearly two million acres, starred with beautiful lakes and intersected by winding streams. No reserve in Canada can approach it in the wealth of attractions it offers to the lover of out-of-doors.

Away up in the Highlands of Ontario, two thousand feet above the level of the sea, the park is a wonderful spot in which to renew the energies of a tired body or refresh a wearied spirit. Its tonic air filters through hundreds of square miles of pine, balsam and spruce; the days are usually long with bright sunshine, while the cool evenings are a time of enchantment. The park is a paradise for the fisherman and canoeist; the excellence of its sports draws anglers from every part of the Dominion and from every state in the Union while the canoeist can travel for hundreds of miles in his lightcraft and in a veritable kingdom of his own. The accommodation in the park is such that the most varied tastes can be pleased.

There are hotels for those who want to be in the wilderness—yet enjoy all the comforts that good service and social companionship can bring; there are groups of log cabin camps, comfortably furnished and ideal for family parties, with central lodges containing recreation and dining rooms where you may dine and find everything ready for you on your return from the tramp; or if you have planned to camp under your own canvas, you may step into a canoe at one of the little railway stations and after a short paddle find a site unmarred by the hand of man, yet within easy reach of the park outfitting stores.

Many families now go into the park expressly for the camping, making their headquarters at the hotels long enough to get supplies and camping outfit ready for the trip. Then in canoes, and with guides or without them, they launch out into the deep woods, camping where fancy prompts.

A handsome illustrated publication telling you all about this famous park is issued by the Grand Trunk Railway and a copy can be had free on application to J. Quinlan, District Passenger Agent, Grand Trunk Railway, Montreal, Que.

FELT LIKE A NEW PERSON

After Taking Only One Box of "Fruit-a-lives"

EAST SHIP HARBOR, N. S.
"It is with great pleasure that I write to tell you of the wonderful benefit I have received from taking 'Fruit-a-lives'." For years, I was a dreadful sufferer from Constipation and Head-ache, and I was miserable in every way. Nothing in the way of medicines seemed to help me. Then I finally tried 'Fruit-a-lives' and the effect was splendid. After taking one box, I feel like a new person, to have relief from those sickening Headaches."

Box, 6 for \$2.50, trial size, 25c. At all dealers or agent postpaid by Fruit-a-lives Limited, Ottawa.

KEEP THE POTATOES GREEN AND GROWING

(Experimental Farms Note)

Many are growing potatoes in Canada this year, for the first time, and as a result of the greatly increased number of growers the crop will probably be greatly increased. But to insure a good crop there must be an abundance of moisture in the soil and the tops must be protected from insects and disease.

CULTIVATION.—The soil should be kept cultivated with the cultivator or hoe until the tops meet sufficiently to shade the ground. As most of the tubers develop in the three or four inches of soil nearest the surface, and as the tubers will not develop well in dry soil, quite shallow cultivation is desirable at this season of the year. In soil which is dry there may be good development of tops but there will be few tubers. The roots in such cases have gone down deep into the soil to obtain moisture but the tuber-bearing stems, which are quite different from the root system, do not develop well.

Where the soil is a loose, sandy loam, hilling is not necessary and may be injurious, as the soil dries out more than if left on the level. In heavy soils it is desirable to hill the potatoes as it will loosen the soil and the tubers will be shapelier than when the ground is left level. When there is sufficient rainfall and moisture in the soil hilling is likely to give best results in all kinds of soil as the soil will be looser and the tubers can push through it readily. As a great development of tubers takes place during the cooler and usually moister weather of the latter part of summer, it is very important to keep the plants growing well until then. In one experiment it was shown that during the month of September there was an increase of 119 bushels of potatoes per acre.

PROTECTION OF POTATO TOPS FROM INSECTS.—It is very important to prevent the tops of potatoes from being eaten by insects, particularly by the Colorado Potato Beetle. The old "bugs" do not do much harm to the foliage, as a rule, and usually the plants are not sprayed to destroy these, although the fewer there are to lay eggs the less difficulty there will be in destroying the young ones. These begin to eat rapidly soon after hatching, and close watch should be kept so that the vines may be sprayed before much harm is done. Paris green kills more rapidly than arsenate of lead but does not adhere so well, and in rainy weather it is desirable to have something that will stay on the leaves so that they will be protected until it stops raining and thus prevent the tops being eaten. At the Central Experimental Farm a mixture of Paris green and arsenate of lead is used in the proportion of 8 ounces Paris green, 1 1/2 pounds paste arsenate of lead (or 12 ounces dry arsenate of lead) to 40 gallons of water, in order to get the advantage of both poisons. It may be that it is not convenient to get both poisons when either 12 ounces of Paris green or 3 pounds paste arsenate of lead (or 1 1/2 pounds dry arsenate of lead) to 40 gallons water could be used, or in smaller quantities, say 1 ounce Paris green to 3 gallons or 3 1/2 ounces arsenate of lead or half that quantity of dry to 3 gallons of water. An experiment conducted for six years at the Ontario Agricultural College, Guelph, showed that, on the average, where the tops were sprayed to kill "bugs", the yield was 186.9 bushels per acre, while when the tops were not sprayed and allowed to be eaten, the yield was only 98.2 bushels per acre. It is desirable not to stop with one spraying which usually does not kill all the bugs but to spray several times if necessary, so that as little foliage

IMPROVED SERVICE ON C. O. & A. Q. & W.

Express Trains Now Carry Parlor Car and Service Greatly Improved

The Quebec Oriental from Matapedia to New Carlisle and the Atlantic Quebec and Western Rly. from New Carlisle to Gaspé have greatly improved their service on these roads. On Mondays, Wednesdays and Fridays a parlor car attached to the regular express leaves Gaspé for Matapedia and leaves Matapedia every Tuesday, Thursday and Saturday for Gaspé. This service is greatly appreciated as frequently the passenger coaches are crowded.

Improvements are also being made to the road bed. Passenger and freight traffic are unusually heavy this season.

As possible is eaten.

PROTECTION OF THE POTATO FROM LATE-BLIGHT AND ROT.—In some years the crop of potatoes is much lessened by the Late Blight disease and when rot follows little of the crop may be left. It is, therefore, very desirable to prevent this disease from spreading. This is done by keeping the plants covered with Bordeaux mixture from about the first week of July, or before there is any sign of the disease, until September. Sometimes the first application of Bordeaux mixture is made before the potato beetles are all killed when the poison for them may be mixed with the Bordeaux. While the disease is not very bad every year it is well to be prepared. There was an average increase per year of 94 bushels of potatoes from spraying with Bordeaux mixed in three years.

The formula for Bordeaux mixture for potatoes is 6 pounds copper sulphate or bluestone, 4 pounds freshly slaked lime to 40 gallons of water. While the bluestone will dissolve more quickly in hot water; if it is not convenient to get this, it may be suspended over night in a cotton bag in a wooden or earthen vessel containing four or five or six gallons of water. The lime should be slaked in another vessel and before mixing with the copper sulphate solution should be strained through coarse sack-cloth or a fine sieve. The copper sulphate solution is now put into a barrel, if it has not already been dissolved in one, and enough water added to half fill the barrel; the slaked lime should be diluted in another barrel with enough water to make half a barrel of the lime mixture. Now pour the diluted lime mixture into the diluted copper sulphate solution and stir thoroughly, when it is ready for use. The concentrated lime mixture should not be mixed with the concentrated copper sulphate solution, as, if this is done, an inferior mixture will result. If the barrels are kept covered so that there is no evaporation, stock solutions of the concentrated materials may be kept in separate barrels throughout the season. It is important to have the quantities of lime and copper sulphate as recommended, but, in order to be sure that enough lime has been used and there is no danger of burning the foliage, let a drop of ferrocyanide of potassium solution (which can be obtained from a druggist) fall into the mixture when ready. If the liquid turns reddish brown, add more lime mixture until no change of colour takes place.

ASTOUNDING REPORT FOR CAMPBELLTON.

The wife of a merchant had stomach trouble so bad she could eat nothing but toast, fruit and hot water. Everything else would sour and ferment. ONE SPOONFUL buckthorn bark, glycerine, etc., as mixed in Alder-ka benefited her INSTANTLY. Because Alder-ka flushes the ENTIRE alimentary tract it relieves ANY CASE constipation, sour stomach or gas and prevents appendicitis. It has QUICKEST action of anything ever sold. A. MCG. McDonald.
