PRICE \$1.50 PER SET, SENT FREE BY MAIL.

**B. LIPPENS, Insp. of Schools,
1217 De Montigny Street,
Montreal, Que.**

Please send cash with order.

Letters containing money should be registered.

THESE CHARTS, with their clearly defined subdivisions, indicate objects which are easily represented by drawing, and are in constant use in daily life;—the CIRCLE, the principal divisions of which are so striking and easy to recognise at first sight; the LINEAL FOOT, the WEIGHTS, the DOZEN, the SQUARE FOOT, the latter affording an easy means of illustrating the multiplication of fractions, and the teaching of elementary measurement of surface. These different units have been arranged in a graded series of original, concrete illustrations which give the pupils a physical basis to understand the principal operations in fractions.

Descriptive circulars will be sent on application.
