WHERE DOES THE CORN GO?

What has become of this enormous amount of corn, referring to last year's yield, to hold the market so firm? asks The Wall Street Journal.

Some light may be thrown on the matter by studying the census distribution of the crop of 1909. From those figures it appears that over 80 per cent. of the crop is consumed on the farms. Later, at least 50 per cent. of the crop finds its way from the farms to the consuming markets in the shape of meat, milk, butter and eggs. The cotton mill works on corn, and his driver most likely works on corn bread and bacon (which is only condensed corn) and 90,000,000 bushels are consumed directly as human food. Farm draught animals take 27 per cent. of the average crop. Farm result of their toil comes to the market in the form of cereal foods, potatoes, cotton and other necessary commodities. Animals engaged in lumbering, coal and trucking industries consume about 5 per cent.

Corn finds a constantly expanding market in the industrial uses. Of the 1909 crop the mills took 245,000,000 bushels. This equals 9 per cent., of which a portion will return to the farms. Starch and glucose took 1.5 per cent. of the crop. Distilleries consumed 20,000,000 bushels; while 15,000,000 bushels went into the brewing industry. These two together amount to something over 1 per cent. There takes 25,000,000 bushels, and a portion is held over from year to year as a reserve.

Northern and western Europe uses corn, but does not raise it to any extent. The European demand must be mainly supplied by Northern America, Southwestern Europe and South Africa.

The number of directors of the Finance Corporation of Canada, Limited, has been increased from three to seven.
