MALTED
FOOD

A Perfect and Invaluable Article of Diet for

*Copy of Dr. Goodfellow's Analytical and
Practical Report.*

I have analysed and dietetically examined a sample of **Coombs' Eureka Malted Food** with eminently satisfactory results. I found the Food to be very finely ground and to contain a due proportion of Malt. On preparation with milk I found that a steady pre-digestion of starch took place in the cup, and the mixture formed a most delicious food, easily digested and containing a large percentage of soluble matter. The presence of Malt renders the food specially suitable for Infants, Invalids and those of weak digestive facilities, and I can with confidence certify to its nutritious and sustaining qualities.

—John Goodfellow, Ph.D., F.R.M.S.
