

## Feed ensilage—it makes fat stock

**S**TOCK like ensilage—their instinct tells them how good it is for them. They thrive and grow fat upon it—and, once fattened, ensilage will keep them in that condition until a favorable market makes their sale most profitable.

Dairy cows, fed on ensilage, give more and better milk, because the silo retains all the fresh succulence of the undried fodder, preserving its natural juices in the same proportions as they are found in green pasturage.

### A Concrete Silo makes money for its owner

by giving his stock a balanced, healthful ration the year round—and keeping them in good, thrifty condition.

by preserving all his feed in the condition in which it contains the greatest amount of animal nourishment. Dried fodder has lost many of its most valuable constituents.

by keeping his feed in the form most convenient for

handling, and preserving it from all forms of deterioration.

by enabling him to keep stock always in good condition, so as to be ready to take advantage of the highest market.

by making him independent, to a large extent, of inflated grain prices. With a silo he is no longer dependent upon grain for fattening feed in winter.

A concrete silo will pay for itself, in actual feed saved, in a very short time—after that the annual saving is clear profit. And all the time there are other profits from its use—in the greatly improved health and condition of the herd, in greater convenience of feeding, in safety from the danger of fire—which might destroy feed stored in barn or granary—and in the increased value of

the farm that the possession of a concrete silo gives it.

Concrete silos, as well as scores of other improvements of concrete, are fully described in the book, "What the Farmer can do with Concrete." It tells how to build them, and gives full instructions for successful concrete work of all kinds. A copy will be sent to you free, upon request to
