

LESS SURGERY THAN SORCERY

Marvels of France's Work for Maimed Soldiers.

Blind Men Are Cheery and Perfectly Independent.

"Somebody once reproached Watts with having made his Hope so melancholy a figure, crouching blindfolded over her broken lyre, and he replied that the whole point of the picture rested in the one unbroken string, from which all future melody must come. One repembers that One remembers that reply come. One remembers that reply when one sees something of what the French are doing for the re-education of the wounded. If ever a man might mope it is when he has lost his eyes or arms or legs; but the unbroken string is merrily played upon and made to give out cheery music. "Surgery to-day is less surgery than sorcery. At the Maison Bianche, near,

sorcery. At the Maison Bianche, near Paris, there are men amputated of both legs in in the thigh, who will shortly salk, sit even kneel, with so lite stiffness that they might pass for having but a slight touch of rheumatism. I talked to one man who exmands himself for using sticks, smiling

stumps with which they are provided until the artificial limbs arrive are marvels of efficiency as compared with the butt-end of wood or cork. The with the butt-end of wood or cork. The limbs are combinations of fine but strong springs, set in a leather and aluminum mold, and so well made that a leg is guaranteed for a lifetime, for every part is easily renew-

The Maison Blanche, formerly The Maison Blanche, formerly a large hospital for women, is now a military hospital, with four separate medical staff, for its different branches. The artificial limbs are its chief occupation; out it has a ward for madmen, and another for those called "the confined." Here the men looked well, but their set eyes had no meaning in them. One segment to be meaning in them. One seemed to be conscious of nothing, but a spray of lilac in a royal blue medicine bottle; perhaps he was the happiest. But the staff knew how much worse they had been, how much better they would be; and how much good work was going on. The Medecin-chief would be a sad man if his Malson Blanche could be surpassed. The head of the work-shops, where the patients can have a preliminary training in several trades, from cobbling to accountancy, one af-ter the other, if they choose so that they may be sure of getting the right one in the end. talks of the 400 al-ready earning their living as if they were 400 masterpieces, as, indeed were 400 they are.

It is the same story at the Grand Palace, which was soon trken over by the sanitary service as a hospital. For twenty months it has been lighted, matism. I talked to one man who excused himself for using sticks, smiling delightedly at his artificial legs, on the ground that he had only had legs for three days, "and one has to practice running for the tram." The very

AM'S GUARANTEED

beds. It has a complete installation of radioscopy, radiography, scientific gymnastics and such an array of ma-chines for teaching hard hines for teaching hands to hold, feet to walk, arms to lift, heads to turn, as constitutes an Arabian night of wonders. Some of these machines on the Zander principle are extremely complicated; a terrife array of levers and wheels is necessary to move a finger in the right way; others are clever makeshifts, not very durable, but welcome as makeshifts. All the machines can be worked by the men unless they are helpless, and some have a whole programme to go through every day. Casts of the human body and its hurts and paintings of especially interesting wounds are kept. From some of these it is possible to teach anatomy to the blind. If cheeriness is a characteristic of wonders. Some of these machines on

sible to teach anatomy to the blind. If cheeriness is a characteristic of the maimed and the mutilated, the blind are positively gay. At the convalescent home in Reuilly, where they learn various trades, they sound from the garden like birds in an aylary. They can very soon distinguish a distant voice in a babel, and follow it, as the seeing can pick out a figure from the seeing can pick out a figure from a group and watch it. In the room
where blind dictators were reading
aloud to blind typewriters this was
very noticeable. In the brushmaking
department, also, conversations were
going on comfortably across intervening men who were talking in the ing men who were talking. In the big garden were blind men walking slow ly, blind men on the arms of nurses blind men holding each other, but al-so blind men walking freely from the so blind men waiking freely from the hip, with a sure step, and stopping or turning a reasonable distance before they came to a wall or other obstacle. To walk is the first thing they are

All over France this work is going The more a French soldier has suffered, the cheerier he is; and if ever one sees a long face it is a civillan's mourning, perhaps, for the very soldier who uses Hope's last string.—

Minard's Liniment Cures Colds, Etc. A SOFT JOB.

(Judge) Luke—Has he got a soft job?
Paul—I guess so. He lies down on it
all the time.

A DEVOUT WISH.

(London Opinion)

MacQuirk—Yes, sir. my wife always
finds something to harp on.
MacShirk—I hope mine does, too.
MacQuirk—What makes you say you
hope she does?
MacShirk—She's dead.

THE ONLY WAY TO **CURE RHEUMATISM**

Must Be Treated Through the Blood and the Poisonous Acid Driven Out.

The twinges and tortures of rheumatism are not due to cold, damp weather, as so many people suppose. Rheumatism comes from poisonous acid in the blood. This is a medical truth that every rheumatic sufferer should realize. There is only one way to cure rheumatism—it must be treat-ed through the blood. All the lini-ments and rubbing and so-called electrical treament in the world will not cure rheumatism, and the sufferer who tries them is not only wasting money, but is allowing the trouble to become more firmly rooted in the sys-tem and harder to cure when the proper remedy is tried. Dr. Williams' Pink Pills have had remarkable suc-cess in curing rhe-matism lecause they go right to the root of the trouble in the blood, driving out the poisonous acid, releasing the stiffened joints, clearing away the torturing pains, and giving the victim renewed health and ease. Mr. Vincent Brow, Havre Ecucher, N. S., says "For two years I was an almost constant sufferer from rheumatism, the trouble being so had at times that I could scarcely get about. The trouble seemed to bring with it anames and alteret being the seemed to be the seemed to be the seemed to the seem bring with it anaemia, and altogether I was in a very bad condition. I used doctor's medicine for almost a year without relief. Then on the advice of a friend I decided to try Dr. Williams' Pink Pills. I think I took altoresult that I am now enjoying perfect

You can get these pills through any medicine dealer or by mail, post paid, at 50 cents a box or six boxes for \$2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

Colors and Heat.

In an attempt to illustrate graphically the relative values for summer wear of different colors in dress materials, an interesting experiment was recently conducted. Four strips of cloth, made of the same material and weight, but of different colors, were placed on a cake of ice and exposed to the sun. The fabrics were white, yellow, red, and black. The result showed in a striking way how white reflects the sun's rays while black absorbs them.

The ice covered by the piece white cloth was not melted to any appreciable degree during the test; that under the yellow strip was slightly depressed; a deep cut was formed beneath the red cloth, and a groove approximately twice as deep groove approximately twice as deep as that covered by the latter was as that covered by the latte melted under the black fabric.

Events That Pass Us By.

our final destiny. There are innumerable other events, if such they may be lass away without actual results or rass away without actual results or even betraying their near approach by the reflection of any light or shadow across our minds. Could we know all the victsitudes of our fortune life would be too full of hope and fear, exultation or disappointment to afford us a single hour of true sevenity.— Hawthorse.

Origin of the Hackney.

The hackney horse has given quite a number of useful words to the language. He and his name came from Normandy originally—haquenee, really a corruption of the Latin for horse—and he was a riding horse. Being commonly hired out, the name came to be associated with hiring and in course of time also with drudgery. Today there are far more hackney carriages, within the meaning of the act riages, within the meaning of the act, without horses than with. A literary hack is another form of the same name, and hackneyed is an obvious derivation from a common source.— London Chronicle.

Mansonville, June 27, '13.
Minard's Liniment Co., Limited. Yarmouth, N. S.

Gentlemen,-It affords me great pleasure and must be gratifying to you to know that after using 36 bottles of your liniment on a case of paralysis which my father was af-flicted with, I was able to restore him to normal coudition. Hoping other sufferers may be benefited by use of your Liniment, I am,

Sincerely yours, GEO. H. HOLMES.

National Emblems.

On the origin of the adoption of the thistle as the emblem of Scotland history is almost completely silent but traditions is as glib as ever. According to one story, the Danes were stealing barefooted through the darkness towards the Scottish camp (in spite of their rule which regarded a midnight attack upon an enemy as unwarrantable), when one of the soldiers suddenly trod upon a thistle. Involuntarily he uttered a cry of pain, and the Scotsmen, being arous ed, leaped to their feet, hureld themselves upon the Danes, and in-flicted fearful slaughter upon their

The origin of the "wearing of the leak" by Wales is still a matter of archaelogical disputation. Welsh ecclesiastical tradition ascribes it to St. David, who caused the Britons under King Cadwaladr to distinguish themselves by wearing a leek in their bonnets when they fought against the Saxons. Shakespeare, wever, as-cribes the origin to an incident in the Battle of Crecy.

NEW TETRABELODON.

Nebraskan Finds Skeleton of Extinct Animal On a Farm.

A few wiles northeast of Bristow, Neb., lives Z. T. Long, who about a year ago went to inspect a pasture on have nervous apprehensions his farm, where streams, swollen by heavy rains, had caused gullies. In one of these gullies he was surprised to see what appeared to be part of the skeleton of some enormous animal He set about excavating it, but found the job so big as to require special apparatus and men specially trained in the work if the bones were to be taken out uninjured and properly kept in place. So to avoid having his discovery tramped upon by herds of cattle he enclosed it by a barricade and sent word to the University of Nebraska

Without delay two of the university's scientific staff, Prof. Erwin H. Barbour and C. Harold Eaton, started for the Long farm. Work was com-menced at once, and within two weeks the skeleton of a new tetrabelodon practically complete, was discovered. In recognition of a distinguished resident of New York, Dr. Henry Fairfield Osborn, Prof. Barbour has named this

Sleepless ights

liase's

new proboscidean Tetrabelodon os-In brief, says Prof. Barbour, the skull is that of an "unelephantlike elephant." The dome is unexpectedly skull is that of an "unelephantlike ele-phant." The dome is unexpectedly low; the occiput flat, though rounding above; the pit, small. Cranial walls are strikingly thin, and the air cells generally reduced both in size and in number. These do not extend to all parts of the skull as they do in mam-moths and modern elephants. Further moths and modern elephants. Furthermore, they are wanting altogether in

all portions of the zygomatic arch.

The articulated forelimb of this creature indicates an animal little more than seven feet in height, half that of a large mammoth. The vertebrae seem large out of all proportion, being equal in size to those of the mammoth. This new species of tetrabelodon was This new species of tetrabelodon was short legged, broad hipped, heavily bodied and perhaps semi-aquatic in habit. Its body must have dragged close to the ground, adds Prof. Barbour, not unlike the short legged rhinoceros.

oceros.

The jaw is that of an adult, but not an aged individual, as is indicated by the number and condition of the teeth, which slant backward and inward. The low stature of the creature, seven feet, and the long jaw, five feet, made it easy to reach the ground with the lower tusks. It was a grotesque head on a grotesque body. A conjectural restoration of the head drawn in outline appears in the American Journal of Science.

A New Blood-Food Has Been Discovered **That Works Wonders**

SAID TO PUT NEW LIFE INTO PEOPLE THAT ARE RUN-DOWN.

For years doctors have been search For years doctors have been searching for a combination that would enable them to inject into thin blood the elements it lacked. This can now be done and any weak-blooded person can quickly be made strong and well.

Already a small army of ailing neonle has proved the merit of tak-

and well.

Already a small army of ailing people has proved the merit of taking after each meal with a sip or two of water, two chocolate-coated Ferrozone Tablets. This is easily done, and even one week's use of this wonderful blood-food will prove how nourishing and strengthening and flesh-building the treatment is.

Just think of it—Ferrozone uplifts the entire nervous system, removes the blood, makes it rich and redgives the sort of aid that is needed in throwing off weakness and languor. Tens of thousands enjoy the advantages of renewed health through Ferrozone—if you'll only use it, you'll sirely grow strong, too; its beneficial action is noticed even in a week. You see it goes right to work, removes the causes of the trouble and then quickly makes a cure.

A BEAUTIFUL NECK.

How to Improve Your Throat Without Slavery to Routine.

We all know that the neck should not be too short; should be smaller at the top than where it joing the chest and shoulders; that the shoulders should be neither too broad and well developed nor too narrow; that the bones of the chest and back should not be buried with flesh.

It is not given to every woman to have a beautiful neck and shoulders and chest. But she can make the most of the trio, as nature gave them to her, by massage and exercise. And she can chest and shoulders becomes second-

Often the skin of the back and chest and shoulders will have small eruptions when the face of the person is clear and free from any such dis-order. This is because the clothes cov-er the body so tightly that the air and sun have no chance to purify the skin beneath as they do the skin of the

Frequent baths of sea salt also tend to clear the skin of the neck and bring the blood to the surface, giving it the glow of health. Olive oil or some good cold cream applied to this part of the body keeps the pores open and helps

Waitzing Ostriches.

One of the oddest sights of the sandy stretches of plain in southern Africa is a party of waltzing ostriches. A writer on the subject thus describes their queer antics:

"When there are a number of them they will start off and after running a few hundred yards will stop and, with raised wings, will whirl rapidly round till they are stupyfied or perhaps break a leg. The males pose also before fighting. They kneel on their ankles, opening their wings and balancing themselves attentions. ariles, opening their wings and balancing themselves afternately forward and backward or to one side or the other, while the neck is stretched on a level with the back, and the head strikes the sides, now on the right, now on the left, while the feathers are bristling. The bird appears at this time so absorbed in its occupation as the forget all that is going on around him and can be approached and te forget all that is going on around him and can be approached and caught. The male alone utters a cry, which sounds much like an effort to speak with the mouth shut tight."—Philadelphia Inquirer.
