Hamilton thieves stole over two thousand feet of rail fencing from property in Kenilworth Avenue. Where in the Lord's creation, outside the back townships, do you suppose they'd have a rail fence these days except in Hamilton? It is. such a curiosity in this progressive age that no wonder it was stolen. It BROOK, Rec.-Sec. should have been padlocked.-Ex.

The attention of church authorities and entertainment committees is called to the fact that placing benches or chairs in the aisles is against the law. Several times lately when special services are being held and there is not sufficient accommodation for the gathering the aisles have been blocked by chairs or benches. While it is hard to turn people away from a church service it is better to do so than to endanger

the safety of a larger number who are already within. While cases of fire or other danger are extremely rare it is better that no chances be taken. It is better to be over-cau-tious than to do anything that might mean danger to so many might mean danger to so many

The Parcels Post Bill provides for the division of the country into seven large zones, the three Maritime Provinces forming one and each of the other Provinces one, is a con-venient and natural arrangement. The making of a special low rate for a 20-mile local zone would adequately protect the local merchants from undue competition from the large city department stores. The organ-ization of the system will follow the making of agreements with the railway companies, and in all probabilbefore Parliament again meets the country will be enjoying the benefits of the new service.

the matter in an editorial in The Advance, entitled "Quality Service," and in the next issue criticized the action of the municipality in advertising in a newspaper which he claimed had little circulation. These

editorials roused the ratepayers, who are now petitioning their council to reinstate the local printer.

Every dairyman who is doing any-thing at testing his individual cows, and all progressive dairymen appreciate the far-reaching benefits of such study, knows that it would be worth at least 1,200 pounds of milk extra per cow to secure the right bull. All members of cow testing associations should co-oper-ate in the purchase of good pure bred sires, changing them round after two years in one section, and prove thereby the immense value of heredity in their own herds.
