

and systems affected. There are chapters devoted to the general diseases and the infectious diseases. The work is in German; but should find its way into English, in order that its circle of readers might be greatly enlarged. The author writes in a very clear style and sustains interest in his discussion of the various diseases throughout. To those who can read German we can very cordially recommend this work. We would like to see an English translation of it. The paper, type, and illustrations are the best.

DISLOCATIONS AND JOINT-FRACTURES.

Dislocations and Joint-Fractures, by Frederic Jay Cotton, A.M., M.D., First Assistant Surgeon, Boston City Hospital. Octavo of 654 pages, 1201 original illustrations. Philadelphia and London: W. B. Saunders Company; 1910. Cloth, \$6.00 net; half Morocco, \$7.50 net. Canadian agents—The J. F. Hartz Co., Limited, Toronto.

This is undoubtedly a work of much experience, research, and labor. A book, such as this, must have cost the author much hard toil in its production. The object of the author is to discuss the subject of dislocations and fractures involving the joints. The work is well done. The text is very clear and sets forth diagnosis and treatment in such a manner that any one can understand the author's teachings. The illustrations are very numerous and very good. The application of x-ray methods to the diagnosis of fractures and dislocations, and the preparation of illustrations for such a work as this has completely revolutionized the whole art side of such a work as this. We have examined this work with the utmost care, and feel sure that it will be received by the medical profession as a welcome addition to the list of works on the same subject. We are glad to be able to recommend the book in unqualified terms. The publishers have done their share well; and so the press work and binding are in keeping with the merits of the book.

DYSPEPSIA: ITS VARIETIES AND TREATMENT.

Dyspepsia: its varieties and treatment, by W. Soltau Fenwick, M.D. (Lond.), Doctor of Medicine of the University of Strassburg. Octavo of 485 pages, illustrated. Philadelphia and London: W. B. Saunders Company; 1910. Cloth, \$3.00 net. Canadian agents—The J. F. Hartz Co., Limited, Toronto.

Dr. Fenwick is such a well known writer on diseases and disorders of the digestive organs that the fact merely needs mention to give any work coming from him on these subjects a good standing. The subject of dyspepsia is a very important one, and a good book on it is ever welcome to the medical practitioner. The author tells us that he began this
