Syr. Hypophos. Co. Fellows

Contains the Essential Elements of the Animal Organization—Potash and Lime ;  
The Oxidising Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine; (each fluid drachm contains the equivalent  
of 1-64th grain of pure Strychnine).

And the Vitalized Constituent—Phosphorus; the whole combined in the form  
of a Syrup with a Slightly Alkaline Reaction.

It Differs in its Effects from all Analogous Preparations; and it possesses the  
important properties of being pleasant to the taste, easily borne by the stom-  
ach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Chronic Bron-  
chitis, and other affections of the respiratory organs. It has also been em-  
ployed with much success in various nervous debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive  
properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes  
assimilation and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and  
melancholy; hence the preparation is of great value in the treatment of  
mental and nervous affections. From the fact, also, that it exerts a tonic  
influence, and induces a healthy flow of the secretions, its use is indicated in a  
wide range of diseases.

This preparation can be procured at all chemists and druggists everywhere.
