those of the chief medical bodies on the Continent, have been obtained by the ROYAL NATIONAL LIFE-BOAT INSTITUTION on the subject. These Directions have been extensively circulated by the Institution throughout the United Kingdom and in the Colonies. They are also in use in Her Majesty's Fleet, and have been translated into French, German, Spanish and Swedish:—
Send immediately for medical assistance, blan-

kets, and dry clothing, but proceed to treat the patient instantly on the spot, in the open air,

whether on shore or affont.

The points to be aimed at are first and immediately, the RESTORATION OF BREATHING and the PREVENTION of any further DIMINUTION of the WARMTH of the BODY; and, secondly, after breathing is restored, the promotion or Warmith and CIRCULATION.

The efforts to restore Breathing, and to prevent any further diminution of the warmth of the body, must be commenced immediately and energetically, and must be persevered in for several hours, or until a medical man has pronounced that life is extinct. Efforts to promote Warmth and Circulation must be deferred until natural breathing has been restored.

TO RESTORE BREATHING. To Clear the Throat-

1. Place the patient on the floor or ground with his face downwards, and one of his arms under the forehead, in cautiously, & must which position all fluids will not be such as to escape by the mouth, and the promote Warmth & tongue itself will fall forward, leaving the entrance into the windpipe free. Assist (his is induced before operation by wiping and cleansing the mouth.

2. If satisfactory breathing commences, adopt the treatment described below to promote Warmth and Natural Breathing. If there be only slight breathing-or no breathing, or if it fail, then—

To Excite Breathing-

3. Turn the patient well and instantly on the side, and.

4. Excite the nostrils with snuff, hartshorn, smeltingsalts, or tickle the throat with a feather, &c., if they are at hand. Rub the chest and heavy rain, frost, face warm, and dash cold or snow.) water on it.

5. If there be no success, lose not a moment, but in-

stantly To Imitate Breathing-

6. Replace the patient on

the face, raising and supporting the chest well on a folded feet. coat or other article of dress.

7. Turn the body very gently on the side and a little beyond, and then briskly on the face, back again; repeating these measures deliberately, efficiently, and perse-immediately proveringly about fifteen times cured, take dry in the minute, or once every four seconds, occasionally varying the side:

forces the air out; when turned on the side, this pressure is re- restore breathing. moved and air enters the chest. I

TO PREVENT ANY FURTHER DIMINU-TION OF WARMTH. N.B. Theseefforts must be made very circulation rapidly; for if circulation

breathing has been restored, the life of the patient will be andangered. other effect therefore, should be sought from them, than the prevention of evaporation, and its result, the diminution of the

body. 1. Expose the face, neck, & chest, except in severe weather (such as

warmth of the

2. Dry the face, neck, and chest, as soon as possible with handkerchiefs or anything at hand; and then dry the hands and

3. As soon as a blanket or other covering can be obtained, strip the body; but if no covering can be clothing from the bystanders, dry & and re-clothe the

8. On each occasion that the body is replaced on the face, make uniform but efficient pressure with brink movement, on the back between and below the shoulderblades or bones on each side. removing the pressure immediately before turning the body on the side;

[the first measure increases expiration, the second commences inspiration.

* * The result is -Respiration or Natural Breathing; —and, if not too late,—Life. Cautions.

1. Be particularly careful to povent persons crowding round the body.

2. Avoid all rough usage and turning the body on the back.

3. Under no circumstances hold the body up by the feet.

N.B.—The Directions are printed in parallel Columns to avoid confusion, and to insure that the efforts to obtain both objects shall be carried on at the same time.

TREATMENT AFTER NATURAL BREATHING HAS BEEN RESTORED.

To promote Warmth and Circulation.

1. Commence rubbing the limbs upwards, with firm grasping pressure and energy, using handkerchiefs, flannels, &c., [by this measure the blood is propelled along the veins towards the heart.]

The friction must be continued under the blan-

ket, or over the dry clothing.

2. Promote the stammth of the body by the application of hot flannels, bottles, or bladders of hot water, heated bricks, &c., to the pit of the stomach, the armpits, between the thighs, and to the soles of the feet.

3. If the patient has been carried to a house after respiration has been restored, be careful to let the air play freely about the room.

4. On the restoration of life, a teaspoonful of warm water should be given; and then, if the power of swallowing have returned, small quantities of wine, warm brandy and water, or coffee, should be administered. The patient should be kept in bed, and a disposition to sleep encouraged. General Observations.

The above treatment should be presevered in for several hours, as it is an erroneous opinion that persons are irrecoverable because life does not soon make its appearance, cases having been successfully treated after persevering for many hours.

Appearances which generally Accompany Death. Breathing and the heart's action cease entirely; the eyelids are generally half-closed; the pupils dilated; the jaws clenched; the fingers semicontracted; the tongue approaches to the under edges of the lips, and these, as well as the nostrils, are covered with a frothy mucus. Coldness and pallor of surface increase.

Royal National Life-boat Institution. London, May, 1860.

EXPECTATION OF LIFE.

By "expectation" of life is meant-not the [by placing the patient on the body, taking care length of days that each individual in a commuchest, the weight of the body not to interfere nity may expect—but the average duration of life with the efforts to of a large number of persons of a similar age.

The latest and most reliable table of expectation of life is that prepared by the Registrar-

Registrars of Births, Marriages and Deaths throughout the Kingdom.

body with salt

or spirits.

4. Do not place the patient in a warm bath.
