eases—T. D. Macgillivray, B.A.,
and E. W. Sproule, equal.

Dr. Mundell's Prize in Surgical
Anatomy—J. G. Dwyer, M.A., King-
ston.

Science.

THE examinations in Science have
begun and as usual the market
was opened with Descriptive Geom-
etry in the lead. Bidding for places
on the exchange was brisk and prices
were high. Many new faces were
seen and also many of the old brokers
were present or had substitutes to
look after their interests. This state-
ment is not intended as a hint to ex-
aminers to start an investigation for
it is generally conceded in Science
Hall that the end justifies the means
in case of passing Descriptive Geom-
etry. Occasionally a "rare avis" is
discovered who possesses an imagin-
ation more vivid than Rider Haggard
and a genius for seeing planes inter-
secting in space, who is able to attain
even the coveted first division. We
are sure however that a proper medi-
cal examination would reveal the
fact that such a one is abnormal in
more than one respect, and his end
will be an untimely one.

The novelty of writing Exams. in
Grant Hall has already worn off and
the boys are now able to concentrate
their attention to the question paper
instead of wandering in imagination
to more congenial scenes. We are of
the opinion that Science examinations
should all be held in the respective
rooms where the lectures were deliv-
ered so that memories would be
sharpened and the ability to think
increased by the inspiration afforded
by the familiar surroundings.

The members of the Final year in
Science are working in conjunction
with the Arts men to make Students
day the success it deserves. The val-
