

Dysentery and bilious disorders.—The medical qualities of pulverized charcoal are daily developing themselves. In addition to its value in bilious disorders, two ounces of the charcoal, boiled in a pint of fresh milk, may be taken in doses of a wine-glassful, by adults, every two hours, in the most obstinate dysentery, until relief is imparted, which has not failed to be the effect in almost every instance. It is harmless, and the experiment may be safely tried. Charcoal made from maple wood is the fittest for this purpose.

Cement.—Isinglass boiled in spirits of wine, will unite broken glass.

1838.—JUNE begins on Friday; hath 30 days.
