

THE WAUGH "DREADNAUGHT"

A Drill that Stays on the Job

The "Dreadnaught" is an investment that soon pays for itself in Time and Power saved. Its staunch construction has given it a reputation for staying on the job with low upkeep. It not only increases production because of its speed in drilling, but also, it doesn't lose holes like other machines, for its cushion protection permits the rotation to operate with full force, while withdrawing a "stuck" steel, without danger of damage to its fronthead. Altho a heavy service drill that has broken many tunnel records, yet it is light enough to permit its being used unmounted for down hole work.
