

Massey-Harris Drills can be depended on

"A good start is half the battle." Sowing your grain with a MASSEY-HARRIS DRILL is a big factor in securing a good start of grain and a bountiful harvest. Uniformity of sowing is a characteristic of all Massey-Harris Drills. They sow the desired quantity at the desired depth and always covers satisfactorily.

The work of a Drill can only be accurately judged at harvest time—for its results that count. It's worth while, therefore, to select a Drill that has a reputation for reliability as proved by actual results, and you will save yourself a lot of worry and uncertainty.

MASSEY-HARRIS DRILLS have been in use for many years in all parts of the grain-growing world and have won a very enviable reputation for their satisfactory work under varying conditions. Perhaps the best proof of their superiority is the steadily increasing demand for these Drills. Where most used they are most appreciated.

They are made in a great variety of styles and sizes to meet all sorts of conditions:—Hoe Drills, Shoe Drills, Single and Double Disc Drills, Fertilizer Drills, etc., so that no matter what your requirements there is a Massey-Harris Drill to suit.
