

12. A review of this Plan will occur no later than three years after this agreement goes into effect and will be conducted every three years thereafter. The review will include an assessment of the effectiveness of the Plan in achieving the management objectives of the Parties and any other issues either Party may wish to raise, including, but not limited to:

- (a) whether the exploitation rate caps established under Paragraph 9(b)-(d) have prevented either Party from accessing its own stocks to meet its fishery management objectives or from harvesting other allocations as provided under PST agreements; and
- (b) issues associated with the procedures and methods employed to estimate and account for total coho mortalities, including those incurred in mark-selective fisheries. The Plan will be refined, as required, based on the review and the need to incorporate results of bilateral technical developments (e.g., establishing criteria to define MUs and the basis for biologically determining allowable exploitation rates, developing a common methodology for measuring exploitation rates occurring in Canadian and U.S. fisheries, development of bilateral management planning tools, etc.).

13. Test fisheries sanctioned by the Fraser Panel of the Pacific Salmon Commission for purposes of providing information for the management of Fraser sockeye and pink salmon should be conducted in a manner that minimizes coho by-catch mortalities.
