

## A WIFE'S MESSAGE

**Cured Her Husband of Drinking.**

**Write Her Today and She Will Gladly Tell You How She Did It.**

For over 20 years her husband was a hard drinker. He had tried in every way to stop but could not do so. At last she cured him by a simple home remedy which anyone can give even secretly. She has Drunkenness in their home to know of this, and if they are sincere in their desire to cure this disease and will write to her she will tell them just what the remedy is. She is sincere in this offer. She has sent this valuable information to thousands and will gladly send it to you if you will but write her today. As she has nothing to sell, do not send her any money. Simply write your name and full address plainly in the coupon below and send it to her.

MRS. MARGARET ANDERSON,  
104 Home Avenue, Hillburn, N. Y.

Please tell me about the remedy you used to cure your husband, as I am personally interested in one who drinks.

## QUESTIONS AND ANSWERS. Miscellaneous.

(Continued from page 680.)

having a comparatively low percentage of solids other than fat, the tendency is to "blueness" after creaming; while milk containing a relatively high percentage of solids not fat will not look so blue.

However, generally speaking, we may say that milk tends to look blue after removal of the cream, but the degree of blueness will depend upon how completely the fat is removed by creaming, and upon the nature and proportion of the other solids remaining in the skim milk.

H. H. D.

## CREAM-TESTING.

What should cream test, by Babcock test, when it takes 41 lbs. cream to make 13 lbs. of butter? **M. E. K.**

Ans.—It will depend upon the overrun, which is a varying quantity. Assuming an average overrun of one-sixth, the cream should have tested about 27 per cent.

## FEED FOR SOW AND YOUNG PIGS.

What feed would you advise to make pigs thrive, and also what is good to feed a brood sow with a young litter of pigs, to make her furnish plenty of milk for them? **A SUBSCRIBER.**

Ans.—For young pigs, there is nothing better than shorts scalded and skim milk poured over, and all stirred well, and fed while warm. To induce milk production in a brood sow, she must be fed liberally. A very good ration is made by mixing two parts fine-ground oats with one part bran and one part wheat middlings, and allowing the food to soak between meals. A few roots are beneficial, and sweet skim milk is very good.

## STUNTED PIGS.

I saw an advertisement for Duroc-Jersey swine and Leicester sheep. I wrote the advertiser for prices for a brood sow. He told me he had no sows, but he had some nice three-months-old pigs that he would sell for \$12 apiece, cash with order. I sent for the pigs, and they only weighed 82 lbs., or about 41 lbs. apiece. I wanted those pigs for breeding purpose, and they have been stunted. I claim that he has misrepresented those pigs to me. I wrote him to send my money back as soon as I got them. He has not answered my letter yet. What steps would I take to recover damages.

Ans.—We think you should have refused to accept the pigs, or at least have tendered them back promptly after having received and weighed them. It may be, however, that you are entitled to damages for misrepresentation, and your proper course in proceeding for same would be to write the party first, making demand of the amount you consider you are entitled to, and then, in the event of his failing to settle with you, sue him in the Division Court.

## UNNATURAL MOTHER

I have a grade Yorkshire sow, one year old, due to farrow on May 19th, which made every appearance of being on time, and was occasionally looked after for three days and nights. Saw no sign of her having, or having had, any pigs. She was very quiet; always ready to come to the feed trough, but on the 25th found she was drying, and has since quite dried up. What became of the pigs? Did she eat them as fast as dropped, or what? Did not see any signs of her having had any pigs. I never heard of such a thing before, and have raised hogs for 50 years. Sows were fed during the winter on sugar beets, and cracked buckwheat and boiled feed turnips, and middlings, with milk occasionally—a mixed ration.

**AN OLD SUBSCRIBER.**

Ans.—From a number of causes, not all of them the fault of the sow, but some not very well understood, a sow will attack and eat her newborn pigs. In the case of the sow mentioned by our correspondent, there is scarcely any doubt that she had given birth to pigs when unnoticed, and had devoured the whole of them. This incident emphasizes the wisdom of close, rather than occasional, looking after.

**Make a big profit from every cow \$400**

Do you know what your cows are doing? Do you know which ones are profitable—which ones are eating their heads off? It will pay you to get rid of the robber cows.

## The Automatic Milk Scale and The Facile Jr. Babcock Tester

will show you in a short time which cows in your herd are paying a profit.

**The Automatic Scale** is made especially for weighing milk in the pail. There is a loose indicator on the dial that can be set at by a thumb screw when the pail is on the hook. Then when the pail of milk is placed on the hook this indicator gives the exact net weight of the milk. It has another indicator that records the same as any spring balance; it can be used for weighing anything up to 30 pounds—larger sizes weigh up to 120 pounds.

**The Facile Jr. Babcock Tester** is designed especially for use in the dairy and on the farm. It is extremely simple in construction and operation. The working parts consist of but two cut gears and they are enclosed in a cast iron case to keep them free from dirt and to prevent their catching clothing, towels, etc. It turns easily without vibration or jar. It is sent complete with glassware, bottle brush, acid and full directions for use. It will pay you to have this scale and tester whether you milk three or thirty cows.

Our free catalog shows everything for milk dealers and dairymen at lowest prices.
