

MASSEY-HARRIS SHOES DRILLS AT WORK ON A PRAIRIE FARM.

N.B.—This illustration shows the different sizes of machines, viz., 15, 19 and 25 Shoes, requiring two, three and four horses respectively.

MASSEY-HARRIS SHOE DRILL. . .

HERE no longer exists a doubt but that in many sections of country the Shoe Drill is the most profitable to use. The Shoes work and clean nicely in soil, the nature of which forbids the use of a Hoo Drill. The MASSEY-HARRIS improvements in Shoe Drills have brought this method of seed sowing to a high state of perfection. The Shoes and Draw Bars are so shaped and connected as to pass over obstructions readily.
