c. For

er)and breake

breake down-wards, the violence wherewith the fire breaketh our is such, and of so strange an execution, that men have beene found dead, without any outward figne in their flesh, and yer all their bones burnt to dust. So the blade of the sword hath beene found brokenall to peeces in the scabard, and the scabard whole without blemish: And a cristall glasse all shinered in peeces, his couer and case remaining sound, which commeth to passe, for that in the flesh, in the scabard, and in the case, the fire being so subtile of nature, findeth casse passage without resistance, but the bones, the blade, the Cristall, being of substance more solide, maketh greater relistance, and so the fire with the more fury workers the more his execution in its objects. As was seene in the Spanish Admirall (or Captaine) after my imprisonment, croffing from P.mama to Cape san Francisco, a Rayo (for so the Spaniards call a thunderclappe) brake ouer our shippe, killed one in the fore-toppe, astonish ed either two or three in the shroudes, and split the Mast in strange manner; where it entred, it could hardly be descerned; but where it came forth, it draue out a great splinter before it; and the man flaine, was cleane in a manner without figne or token of hurt, al-, though all his bones turned to powder, and those who lived, and recovered, had all their bodies blacke, as burnt with fire, which plainly declareth and confirmeth that about faid, and may ferue to judge in such occasions of persons hurt with thunder: for if they complaine of their bones, and have little figne of the fire, their hazard of death is the greater, then when the fire hath left greater impressions outward. The fire out of a cloude worketh like effect only, where it leveleth directly, as experience daily teacheth; killing those who are opposite, hurting those who are neere. And only terrifying those who are further distant.

In like manner the peece of Ordinance hurteth not those which stand aside, nor those which stand a slope from his mouth, but those alone which stand directly against the true point of his levell: though sometimes the winde of the short ouerthrowerh one, and the splinters being accidents) mayne and hurt others. But principally where the peece doth resemble the thunders appe; as when the shippes are bourded! For then, although the Artillery be discharged without short, the sury of the sire; and his piercing nature is such, as it entreth by the seames, and all parts of the ships sides, and meeting with so structure as Pitch, Tarre, Ocombe, and sometimes with powder, presently converteth all into slames.

For anoyding whereof, as also the danger and damage which
