ST. JOHN STAR.

ST. JOHN, N. B., JUNE 18, 1908.

NEGLECT OF DUTY.

Three times within the past few weeks have judges presiding at murder trials in the Maritime Provinces found it necessary to use strong language in advising jurors as to their duty. There has been one case in each of the three provinces, this indicating that the negligence, or worse, is not confined to any particular district nor due to any local cause. In Charlottetown quite recently the jury brought in a verdict of not guilty in the charge of murder against Richard Gray, and later a similar verdict was rendered on the charge of incest. The presiding judge referred to the jury in the second case as men who had disgraced themselves and their country, who had brought contempt on the honorable positions they were called to fill in assisting in the administration of justice, and recommended that they be forever deprived of the privilege of acting as jurors. His sentence was called forth because, in his opinion, the jury had acted against ordinary sound judgment, and had rendered their decision out of sympathy with the prisoner.

In Cape Breton not very long ago a man who had murdered his own father was freed by the jury in spite of overwhelming evidence. The court pointed out that the verdict brought contempt on the province, but the judge was of course powerless to alter the decision. In Prince Edward Island last week in the Doherty trial the jury disagreed, a development which is utterly incomprehensible in view of the conduct of the prisoner before and after the crime, and of his own statements. Judge Fitzgerald told the jury there could be, in his opinion, no possible reason for lack of agreement, yet in spite of this four or five of the jurors held out for a verdict of not guilty on the ground of insanity. The contention is that the murderer while mentally normal immediately before and immediately after the crime, was insane at the instant when he pulled the trigger. As a matter of fact every murderer is insane in a sense, for no one in his proper mind could ever kill a fellow being. But this is not the form of insanity recognized by law. Literally every one of us is insane, in that we are not absolutely balanced, but it is only when the mental poise is so disturbed as to make us wholly irresponsible that insanity is admitted.

The verdicts in the three murder cases mentioned are evidence of a growing tendency on the part of jurymen to shirk the responsibility of their office. The Doherty case is not simply a disagreement on questions of sympathy; it is a clear indication that men are unwilling to perform the duties imposed upon them by their oath, and that they are ready to evade these duties when the proper performance of them involves the punishment of a fellow man. They evidently fail to see that such criminal neglect is bound to bring the law into contempt, and that they who condone crime through either sympathy or because of abhorrence of the death sentence, are themselves guilty in that they countenance the gravest offence against society. This disrespect towards justice is having its inevitable result. Murder in Canada is becoming more and more common, and certainly the spirit which is now apparent in jurymen will not tend to a decrease of crime.

RE-OPENING THE SCHOOLS.

A week from today the public schools of St. John are to close for the summer holidays. According to the usual programme they will reopen during the last week of August. Labor Day will come on September 7th, so that two weeks of what is now looked upon as the school term will be lost. When classes resume in August the majority of the pupils assembled are given their seats, but fully half of them afterwards remain at home until after the holiday. A large number of families spend the summer out of town and parents consider that the first week in September is quite early enough for the schools to re-open. They accordingly avoid the inconvenience of sending their children to the city every morning until they themselves move back to town. There are numbers of others who do not go out of town for the summer but who are equally firm in the opinion that just as much work can be done by keeping their children at home until after the holiday. It has been found that during the first week or two practically nothing is done in the class rooms, but in spite of this the school trustees continue the re-opening in August. It is to be hoped they can see their way clear this year to acting in accord with the views of the parents.

The star begs to suggest that the school-board should have commenced at an earlier date the construction of the new drill hall, repairs to the Marsh Bridge, extension of car lines to Rockwood, development of power at the falls, and investigation of the gas supply at city hall. If new duties for this proposed board are to be piled up before the general scheme is even considered, no one will be found with sufficient nerve to accept membership, unless indeed it be Aid McGoedrick.

It does seem peculiar doesn't it, that the school board can issue debentures without even asking the advice of the council, and then order the city to provide interest and sinking fund on the debt. But probably this is no worse than the habit women have of investing in spring millinery and sending the bills to their husbands.

Fortunately the year's fire on the river did not involve loss of life. It can scarcely be said that the burning of the Aberdeen need cause deep regret. That boat may have been good enough of its kind, but it was a poor kind.

"Never mind the why and wherefore," as Josephine remarked, "Love can level ranks. And therefore—" OP POST-MORTEM PRAISES.

I've noticed when a fellow dies, no matter what his been—A saintly chap or one whose life was dark as night—His friends forget the bitter words they spoke but yesterday. And now they find a multitude of pretty things to say. I fancy when I go to rest some one will bring to light Some kindly word or goodly act long buried out of sight. But, if it's all the same to you, just give to me instead The bouquets when I'm living and the knocking when I'm dead.

Don't save your kisses to tempt upon my marble brow, While countless no-nothings are hurled upon me now; Say just one kindly word to me while I mourn here alone, And don't save all your eulogy to carve upon a stone! What do I care if when I'm dead the Bloomingdale Gazette Gives me a write-up with a cut in mourning borders? It will not flatter me a bit, no matter what is said, So kindly throw your bouquets now and knock me when I'm dead.

It may be fine, when one is dead, to have the flowers come in loads from relatives, you know. It may be nice to have these things for those you leave behind, But just as far as I'm concerned, I really do not mind. I'm quite alive and well today, and while I linger here, Lend me a helping hand at times—give me a word of cheer, Just change the game a little bit; just send the dead a word of cheer. For I will be no judge of flowers when I've cashed in my checks.

TURKISH HEAD SEEKS HOLY LAND MINERALS

Sultan Sends Experts to Jordan Valley in Metal Hunt.

William E. Curtis Tells How Previous Attempts to Exploit It Cost Many Lives.

It has gradually pleased his majesty the Sultan of Turkey to appoint a commission to explore and report on the geology, the mineral resources and particularly the indications of petroleum in the Valley of the Jordan. Says William E. Curtis, the commission has already been selected and organized under the direction of Dr. M. Blanckenhorn, a well-known German geologist, and is assisted by specialists in different departments, German and Frenchmen. They have gone into the field equipped with a great variety of modern geological apparatus and implements for boring into the earth and for other purposes. They began in the neighborhood of Jericho, just north of the point where the Jordan flows into the Dead Sea, and will work northward as far as the Sea Galilee.

The region of the Dead Sea, far below levelwater, and the lowest portion of the earth's surface, is full of geological phenomena as well as historical and Scriptural associations, but it has never been subjected to an accurate or a thorough scientific survey. Indeed, only a small portion of the Valley of the Jordan has ever been explored. Casual observers have, however, noticed many curious freaks of geology, botany, meteorology, and even zoology. The soil contains phosphates, bituminous rocks, nodules of sulphur, gypsum and rain-water cooled mud, and there are evidences of meteoric iron. But those who have given attention to that sacred valley have been searching for historical and Scriptural evidences rather than for natural phenomena. The agents of the Palestine Exploration fund have made a topographic map of the valley; they have tabulated accurate hydrographic records concerning the Jordan and the Dead Sea with a view to ascertaining their past levels and depths of water as compared with those of the present. They have exhaustive reports of the volume and rapidity of the flow and its effect on the topography of the valley.

They have observed remarkable phenomena in terrestrial magnetism and unexplained variation in the magnetic needle. They have also reported the existence of petroleum on the west side of the Dead Sea, and favorable indications on the east bank of the river. But nothing definite has been followed up their discoveries in these respects. The Palestine Exploration fund have made a topographic map of the valley; they have tabulated accurate hydrographic records concerning the Jordan and the Dead Sea with a view to ascertaining their past levels and depths of water as compared with those of the present. They have exhaustive reports of the volume and rapidity of the flow and its effect on the topography of the valley.

NURSING BRITISH BIG GUNS.

Anyone who has caught a glimpse of the big guns mounted in the forts and batteries round the British coast will doubtless have noticed that the mechanism about the breech and carriage is always kept bright and clean. However, few people are aware of the great trouble which is necessarily taken to keep these weapons in his serviceable condition, more especially when close to the sea and in exposed position.

Many defects occur which, if not provided against, would quickly render them either inaccurate in their shooting or dangerous to fire from. The wear and tear due to firing with high explosives, and the erosion caused by sea spray and atmospheric influences, are the most important of these.

When mounted, each gun with its carriage is placed in charge of a gunner of the Royal Artillery, whose duty it is to keep it clean and in working order.

At the end of each day's firing the gun is carefully washed out, and, as soon as it is dry, is oiled. Where cordite is used the bore has also to be coated with mineral jelly; while, if not frequently used, the interior is lacquered with a composition of lead, lamp-black and raw oil.

Guns, again, have frequently to be scraped and painted, and for this it is necessary to dismount them. They are always painted in colors which harmonize with the natural background and surroundings, and in most cases are quite invisible a few yards away. This, of course, is done with a view to concealing them as much as possible from the enemy in case of attack.

THE HISTORY SHEET.

When one remembers that the larger land defence guns are effective at a range of from eight to ten miles, and that modern explosives are practically smokeless, the difficulty experienced by an enemy in locating them will be easily understood.

When a gun and its carriage are issued from the Royal Arsenal, and a "History Sheet," accompanies them. This gives a full description of each gun, known as its "Memorandum of Examination," and contains a full record of a complete history of the gun from the date of manufacture, until it is finally disposed of as unusable.

formal, but usually has too much rather than too little water. Some of the Sultan's under-taken a scheme of irrigation which was to reduce the desolation of the Valley of the Jordan and fill it with cotton plantations and other agricultural enterprises. But the climate is deadly during the summer months, and the atmosphere is saturated with miasma the entire year. No one can be induced to settle there voluntarily, and the soldiers who were sent down to do the work died like flies in the plague of Egypt. Since then its arid wastes have been deserted except for an occasional Bedouin wanderer, and the irrigation enterprise has never been revived.

The entire Jordan Valley is the personal property of the Sultan of Turkey, and if Dr. Blanckenhorn's commission finds petroleum or other valuable minerals he will be the winner. A friend in Syria writes me a graphic account of the accident which recently caused the death of Mr. Warkentin, a banker from Newton, Kan., which has been frequently referred to in the papers and is likely to become an international incident. He says that on Wednesday, April 1, a party of seven American travellers left Damascus by the morning train for Beirut. They were Mr. and Mrs. Barrett and Mr. and Mrs. Sterling of Philadelphia, Miss Fritchard and Mr. and Mrs. Warkentin of Newton, Kan. They occupied two first-class compartments with their courier, Mr. Kosmos of Amsterdam, Holland, and a dragoman named Nusser from Cairo.

Just before the train left Damascus a young man, who proved to be a British subject, named Abdul-Kadir, entered the train and sat with the travellers. He took a heavy belt and revolver from his baggage and placed it on a rack. A little later he took it down, showed it to the travellers, two of whom warned him of the danger of handling such a weapon, and he was about to place it in his saddle-bags, he accidentally pulled the trigger. The heavy bullet plucked the cushions, the light partition into the next compartment, and entered the back of Mr. Warkentin, inflicting a mortal wound. The young Algerine, after realising what he had done, leaped from the train, while the others, in a panic, fled. The wounded man was without medical care until some two hours later at Zallah, where a telegram had summoned the American consul general and Dr. Post, a missionary physician. The wounded and now dying man was carried to the Prussian hospital at Beirut, and, although everything possible was done for him, he passed away just before midnight. An examination next day revealed the fact that the wound was a mortal one, the bullet being found under the skin of his chest, having passed through his body. The consul general summoned a jury, held an inquest, and the friends did all in their power to comfort the stricken wife. The young Algerine was caught April 2, and, as it seems that he is one of the exiles from Algeria under French

Details of all rounds fired, if examinations of bore, and of any alterations made to sights or fittings in order to bring them up to date, are also recorded. Particular attention is paid to the record of rounds fired, as after a certain number, varying with the size of the gun, the bore must be examined to ascertain whether the rifling is being worn by the firing, or whether the gun is cracked, and therefore, dangerous to fire from.

This examination is carried out by specially-trained artificers, who obtain gutta serena impressions of the parts where damage is discovered. These impressions are sent to Woolwich for inspection by experts, by whom the gun may be "sentenced"—that is, pronounced either fit for further use or otherwise.

has the "life" of a gun will only permit of some 200 to 300 rounds being fired from it before it is worn out. As far as possible, therefore, it is fired in peace time. In order that men may be trained in its use, a tube, the bore of which is one inch in diameter, and which is known as an "aiming rifle," is fitted to the inside of the gun exactly in the centre. By this means firing with miniature ammunition is carried out, thus saving both the wear of the gun and the expense of the larger ammunition.

WHEN NOT IN USE.

Great care is necessary in keeping all bearings in the machinery for aiming the gun clean and free from grit. All levers are correctly adjusted, for, of course, the least variation in the accuracy of the shooting.

The hydraulic lever, which controls the breech, also requires constant and careful attention. The liquid in the cylinder is frequently measured, for should it at any time fall below the regulation quantity, the result might be a serious and possibly fatal accident. The breech is covered with a waterproof covering, and a "tampon" placed in the muzzle.

When guns become unserviceable, they are either presented to local authorities for ornamental purposes, or used by the Royal Engineers as hoists, or, in a few cases, thrown into the sea.

protection, he may meet some punishment. It was purely accidental, but in some cases the carelessness because he had been asked why he dared carry such a weapon and was begged to be careful and to put it away.

PROMINENT YOUNG LADY POISONED BY MISTAKE

Took Glass of Poison Thinking It Was Water—Was Visiting Brother in New York.

NEW YORK, June 17.—Miss Myram Frances Bloomer, 29 years old, a daughter of Dr. Bloomer of Cincinnati, Ohio, and who since last January has been stopping with her brother, J. Ralph Bloomer, at a hotel on East Twenty-sixth street, drank a quantity of poison by mistake tonight and died shortly afterwards.

The young woman had been eating a cracker, and, choking, had taken up a glass which she believed contained drinking water. The liquid had been used earlier in the day by Miss Bloomer and her maid to clean some articles of jewelry.

There were several glasses on the washstand, one containing water, the other the poison. A few seconds after Miss Bloomer had taken the poison the brother heard her scream. A physician was called but his efforts were unavailing. Miss Bloomer, according to her brother, was in an unusually happy frame of mind all afternoon and seemed to look forward to a dinner party tonight with eager interest. The father of the young woman, J. P. Bloomer, is a retired railroad man.

Ralph Bloomer was captain and guard on the Yale football team of 1904.

HARVARD STUDENTS SERIOUSLY INJURED

Automobile Skidded and Overturned—Two Occupants Hurled to Hospital Badly Hurt.

BOSTON, June 18.—Two young men are believed to have been seriously injured by the skidding and overturning of an automobile on the Boston end of the Harvard bridge, at an early hour this morning. They were hurled to a Cambridge hospital where neither their names could be learned nor the extent of their injuries.

The automobile was owned by Frederick Theodore Freelinghuysen, a first year student in the Harvard law school who lives at 21 West Morley street, and it is believed that Freelinghuysen is one of the injured.
