

MEN, HERE'S AN OFFER!

You've doctored and doped till you are sick of it all.
You would pay for anything that would give you back your old vim.
You don't want to pay out any more money till you are sure.
I will cure you first and you can pay me afterward. Is that fair? Then get in line.

I know what I can do, because I've done it and am doing it every day. I'm sure that Electricity is the life, and that I can restore it where it is lost. So if you need what I offer, and don't want to risk my price, wear my Belt free until you are cured, then you can pay me.

And when you do pay me the cost is less than a short season of drugging, and how much more pleasant! You put my Belt on when you go to bed; you feel the soothing, exhilarating vigor flowing into your weak body, and while you sleep peacefully it fills you full of the fire of life. You wake up in the morning feeling like a giant.

Now, I can't cure everything. I don't claim to, and I won't take a case that I don't feel sure of, but all those troubles which come from an early waste of vitality, from dissipation of any kind, from decay of nerve power, or from any organic stomach, liver or kidney weakness, I can cure, and those are the cases I am willing to tackle and take chances on. I am curing them every day. All I ask is reasonable security for my belt while you are wearing it.

Dr. McLaughlin: "Dear Sir—I take the opportunity of letting you know the benefit your Belt has given me. I was a poor cripple before I got it, now I can stoop and pick up a pin with ease. It was worth a great amount of money the good it has done me. My advice is that no home should be without one. I thank you for the benefit it has done me."

Dr. McLaughlin: "Dear Sir—I must say that your Belt has done me a lot of good. Since wearing it, three years ago, I have never been troubled with rheumatism. I find the Belt just the thing to do as you say. I have lent it to others, and they speak well of it. Wishing you every success."

That's enough. You need the cure. I've got it. You want it. I'll give it to you or you need not pay me a cent. Come and get it now. The pleasurable moments of this life are too few, so don't throw any away. While there's a chance to be husky and strong, to throw out your chest and look at yourself in the glass and say, "I'm a man," do it, and don't waste time thinking about it.

I've got a beautiful book, full of good, honest talk about how men are made big and noble, and I'll send it to you, free, sealed, if you send this coupon.

Wear My Electric Belt Free
Until I Cure You.

River aux Pins, St. Gabriel, Que.

DAVID BARR, JR., Box 3, Renfrew, Ont.

QUESTIONS AND ANSWERS. Miscellaneous.

ABNORMAL APPETITE.

Can you tell me, through your valuable paper, the cause and cure for cows and young colts chewing wood and bones? A. T. T.

Ans.—Any one of a number of causes may account for this abnormal appetite. Lack of salt, or the lack of some other essential ash constituent in the food may induce the habit, which, once formed, is liable to persist for a time. The composition of the unnatural substance eaten is not always an indication of what is lacking in the food. However, we know of cases where an application of basic slag (Thomas phosphate powder) to the soil has favorably affected the feed grown, and thus indirectly satisfied the animals' craving for phosphorus. In some cases, no doubt, an application of wood ashes would benefit not only the yield, but the nutritive quality of the crop. We would advise experimenting on the land with wood ashes, phosphate powder, or a substitute in the form of bone meal and lime. Meanwhile see that the animals have plenty of salt before them, and give them, besides, mixed with salt, a small closed handful of sifted wood ashes per head twice a week. If this fails, try a tonic made up as follows: Copper sulphate and iron sulphate, each one ounce; powdered gentian root, two ounces; soda bicarbonate, four ounces. Powder well and thoroughly mix. Dose for mature cattle, a level tablespoonful once a day.

DOES WHEAT CHANGE INTO CHESS?—FEEDING FAT INTO MILK.

1. Some farmers claim the small or shrunken wheat will turn to chess. What do you say to that?

2. Is it possible to feed a cow so as to increase the percentage of butter-fat in her milk? Just a common farm cow, not one that is always fed to her limit with grain and meals.

Ontario. A SUBSCRIBER.

Ans.—1. At the risk of incurring the disfavor of a minority of our readers, we make bold to affirm our conviction that wheat will not turn to chess or drips any more than clover will turn to grass. The supposed evidence that it will do so, will not bear critical examination. Chess, like certain other weeds, is very much harder than wheat, and possesses enormous power to stool and spread. When the wheat is killed by a hard winter or other adverse conditions, the chess endures, thrives, multiplies and occupies the ground, producing a luxuriant crop, whereas if the wheat had flourished, the chess would have been so scarce as to be quite inconspicuous. If absolutely clean wheat be sown, and there be no seeds of chess in the ground, no chess can possibly grow in the wheat field. The trouble is there is practically no seed grain sown that is absolutely free from weed seeds, and a surprisingly large amount is more or less infested with chess—sufficiently infested, in fact, to produce a good crop of chess if the wheat should happen to fail. If those who think they are sowing pure seed would examine a few handfuls on a piece of white paper, picking them over kernel by kernel, and separating all impurities, they would be simply astonished how many weed seeds may be present in what appears on cursory examination to be a clean sample, and would easily understand how enough chess seed might be unwittingly sown to produce a fine crop of chess, provided the killing of the wheat leaves it in undisputed possession of the land.

2. A great many elaborate experiments have been conducted to test this point, and while, in some few cases, the investigators have been able to produce slight temporary change in the richness of the milk, by changing the feed, the consensus of opinion is that no permanent difference of any account can be made in this way. The cow is a law unto herself regarding the composition of her milk. Liberal feeding, especially on succulent and laxative feeds, may increase the quantity of milk and the churnability of the cream, and in that way increase the amount of butter made; but an accurate test with the Babcock machine will not indicate any appreciable permanent alteration in the percentage of fat in the milk, due to change in feed.
