

boots and immersion suits, to sleeping bags, shelters and survival equipment. All products, many of which are used by the Canadian Armed Forces, have proven effective in severe snow, ice, high wind, and blizzard conditions. (English)

Canadian Defence Products Guide

The Canadian defence industry has specialized in product areas that reflect the country's geographic condition: vast distances and extreme climatic variations. This has resulted in the development of innovative and advanced transportation and communications equipment, which meet both North American and NATO military specifications. This book describes the products and capabilities of companies that represent the variety of defence products available from Canada. (English, French, Spanish)

Canadian NBC Equipment

Since World War II ended, Canada has been developing protection and detection equipment to counter the threat of nuclear, biological and chemical (NBC) warfare. Today, Canadian-designed NBC equipment ranks high in effectiveness, and meets military specifications of both NATO and many other countries. This guide describes Canadian NBC products from clothing to chemical agent detectors and combat spectacles that have been thoroughly tested by the Canadian Armed Forces and are standard issue to each soldier in the field.
