## THE SCRIBBLER.

ONTREAL. THURSDAY, 28th MARCH, 1822. No. XIII

unc facile ex his est rebus cognoscere quaque.—Lucrerius.
See with what ease we view e'en distant scenes.
And thus from far and near draw ways and means.

In. MACCULLOH,

A friend of mine who is a great astronomer nd stargazer, has erected an observatory proided with a variety of instruments necessary for ne prosecution of his favourite science. Amongst nem there is a large telescope which distinguish. s objects at an immense distance, and, when diected towards the expanse of heaven, penetrates evond our mundane sphere, into the immeasurle space of infinity. He has a nephew whom e is anxious to render as learned as himself in ie system of the universe, but the arch-rogue. henever his uncle's back is turned, takes a deght in levelling the telescope to a horizontal potion, and by turning the glass upon its pivot aking discoveries all around him in this nether anadian world. His uncle having taught him make minutes of his observations on the heaenly bodies, he habitually takes notes in like anner of what he perceives amongst the earthly odies whom he prefers to contemplate. Some of iese he has communicated to me and has promisd me more. I send them to you for the amusetent of your readers. JEREMY TICKLER.

Turned the telescope towards the mountain, and directing it to the window of a young lay's chamber, saw a handsome foot-boy lacing er stays. However, as it is understood she has ade a vow of dying an antiquated virgin, there an be no harm in that,
