

THE EXPANSE OF HEAVEN;

A Series of Essays on the Wonders of the Firmament.

By R. A. PROCTOR, B. A.

1 vol., 12mo. Cloth. Price, \$2.00.

"It is Mr. Proctor's good fortune that not only is he one of the greatest of living astronomers, but that he has a power of imparting knowledge that is not equaled by any living astronomer. His style is as lucid as the light with which he deals so largely, and the plainest of readers can go along with him with entire ease, and comprehend all that he says on the grandest subject ever discussed by mortal intelligence. Most scientific writers either cannot or will not so use the pen as to make themselves understood by the many; not so with Mr. Proctor: he both can and does so write as to command the attention of the million, and this too without in the least derogating from the real dignity of his sublime theme. Few of us can study astronomy, because that implies a concentrated devotion to an inexhaustible matter, but we all can read astronomical works to our great advantage if astronomers who write will but write plainly; and in that way, without having the slightest claim to be spoken of as "scientists," we can acquire no ordinary amount of knowledge concerning things that are of the loftiest nature, and the effect of which must be to elevate the mind. Such a book as 'The Expanse of Heaven' cannot fail to be of immense use in forwarding the work of education even when it is read only for amusement, so forcible is the impression it makes on the mind from the importance of the subjects treated of, while the manner of treatment is so good."—*Boston Traveller*.

"Since the appearance of Ennis's book on 'The Origin of the Stars,' we have not read a more attractive work on astronomy than this. It is learned enough to be instructive, and light enough to be very entertaining."—*Alta California*.

"It reads like a work of fiction, so smooth and consecutive is it; but it inspires the worthiest thoughts and the highest aspirations."—*Boston Commonwealth*.

"Perfectly adapted to their purposes, namely, to awaken a love for science, and at the same time to convey, in a pleasant manner, some elementary facts."—*Church Herald*.

"This is not a technically scientific work, but an expression of a true scholar's conception of the vastness and grandeur of the heavens. There is no dry detail, but blended with the scholar's discoveries are the poet's thoughts, and a true recognition of the Almighty's power."—*Troy Times*.
