31	T. not over high. [$\varphi \text{ } G. \text{ } el.$	8 26	11 56	11 26	0 56

attention, and a stop at once, if possible, be put to further decline. Cows should have mashies of bran, or more nutritive food, and all kinds of stock so conditioned should be carefully protected from the severities of the season. Keep your stables and pens well littered with straw, and if you have plenty of it, keep your yards in the same condition. Littering adds to the comfort of your animals; it increases the quantity of manure, and it adds to their quality, as it absorbs and retains the fluid parts that are otherwise mainly lost. Be certain to keep your diseased animals, no matter of what kind, if you have any, away from the rest of your stock. Diseases are frequently contagious, and the sickly or weak can be better cared for, when separate from the rest.
