

## INCREASE YOUR CROPS

**AND IMPROVE THE QUALITY**, by knowing the proper dates to sow your seeds. Scientists have proved beyond doubt that the moon governs the ocean tide and has an action on vegetation generally. Agricultural experts find that seeds of all kinds give the best results when sown according to Planetary Influence. Increase your crops for this year by sowing your seeds on proper dates. The following testimonials prove my assertion to be scientifically correct.

Dear Sir: I planted two small patches of ground in potatoes to test Planetary Influence. The one planted according to directions produced a crop at the rate of 100 bushels to the acre—the other yielded only 40 bushels per acre. The same variety of potatoes were planted, both pieces of ground were near each other, and the same quality of land, and had the same treatment. This I consider a fair and impartial verdict in favor of "Planetary Influence."

Respectfully,  
L. J. HEATWOLE.

Dale-Esterline, Va.  
Sir: I received your instructions regarding sowing of seeds and have benefited by them. There was a marked difference in the same crops, in the part we got in on the days mentioned and the rest planted within the next few days, owing to our help disappointing us. The part planted on the proper dates lay along the public road. Everyone remarked it and took it to be some different kind of corn from the rest; it grew faster and we remarked both in height and color. We have every confidence in Planetary Influence. Yours truly,  
Mansenville, Que. M. J. C.

Dear Sir: I planted six short rows of potatoes, to prove the Planetary theory

Hundreds of farmers, all over the United States, have been benefited by this knowledge. It is therefore worth your knowing. The proper dates given on receipt of \$1.00 bill.

and planted just two hills on the seventh row. Next day I commenced where I left off the previous day, and finished the plot. Those I planted first came up ten days before those planted on the following day and kept ahead all the way through. The ground was all tilled at the same time and the same way. Therefore I attribute the rapid growth of those first planted to Planetary Influence.  
Lindsay, Ont. L. C. SMYTH.

Dear Sir: I planted early bush squash by your instructions and never had larger better flavored or more constant bearers. I had so many from eight hills of one plant each, after giving neighbors all they wanted I sent a lot to town and they sold in the Asheville market. I planted corn and never had better stalks or better ears.  
Asheville, N. C. S. PLUMADORE.

Sir: Having planted a portion of my land last year with potatoes according to Planetary directions I was much pleased with results and intend planting this year 30 to 40 acres according to dates.  
Charleston, S. C. J. B.

Sir: The Planetary theory is the best guide for planting in the world; in fact, the

only guide we have and we want no other here. Yours truly,  
Bethany, Va. G. W. RIZOR.

Dear Sir: My tomatoes under Planetary Influence did nobly and were unusually nice. I never had such fine ones.  
New Hampshire. MRS. B.

Dear Sir: I planted over thirty kinds of vegetables according to your dates and had an excellent garden.  
Shawano, Wis. W. S. WOOD.

Dear Sir: I sowed by your directions numerous seeds and the crops were the best I ever had. Yours respectfully,  
Nashville, Tenn. W. M. HOWLET.

Sir: We took pains and planted our garden at the proper dates and we were well repaid. Its luxuriant growth and yield were wonderful. The corn and potatoes in the field, set at the proper times, were also exceptionally fine.  
Covington, Ind. M. COLE.

(Extract from Bulletin, Honolulu, Feb. 11.)  
Planetary Influence. In some cases the application of the theory made all the difference between unusually good crops and total failure side by side, with everything else equal.
