

Just a simple law of nature

An apple falling from a tree awoke Sir Isaac Newton and supplied to Science the law of gravitation. The jumping of a tea kettle lid showed James Watt the power in boiling water and gave the world the steam engine.

The intense centrifugal force generated by a revolving tubular bowl was what P. M. Sharples put into a machine for the complete separation of butterfat from milk. Later he made his greatest improvement by utilizing the vacuum generated by the same centrifugal force to

lift milk into the bowl in the exact quantities that the speed of the bowl will skim absolutely clean.

The Sharples Suction-feed Separator, therefore is only an adaption of one of Nature's laws. The intense centrifugal force and the suction-feed principle in the Sharples tubular bowl guarantee perfectly clean skimming at any speed.

The Sharples discovery is protected by United States patents. No other separator is a suction-feed separator. No other maker of separators can make use of the principle.

Suction-feed makes possible the knee-low supply tank, doing away with lifting. The oiling system needs little attention. The one piece bowl—no discs—is easy to clean.

Write for illustrated booklet that tells why more Sharples Machines are in use today than any other make, American or foreign. Dept. 78.

Milk is vital to the welfare of the American people. Its production should be raised to the highest point of efficiency by the use of time and labor-saving machines.
(Signed)
P. M. SHARPLES

ALL TYPES OF BUILDINGS For All Kinds of Farms

We make 286 standard sizes of Barns. We also make Farm Garages and Implement Houses. The building shown above is one of our Standard Implement Houses adapted to the storing of leaf tobacco. Whatever your farm produces store it in a

PRESTON STEEL TRUSS BARN

OR READY MADE BUILDING

They are the sturdiest and most satisfactory type of farm buildings you can get at any price. At the price we ask, it is "value unequalled." The old-style types of construction required a big gang to erect them—and the work of days might be destroyed by a single stroke of lightning.

By the Preston method, Barn erection is a quick and simple matter—and the buildings we put up for you in a week or ten days are there to stay for years—spark-proof, fire-proof and protected against lightning.
