"Dry Ice" by Mail

ream may now be kept froze thout the use of ordinary ice. eam from New York City to by air mail, says The Populence Monthly (New York), and the package is opened the icewill be found frozen hard, just came from the freezer many before! To explain:

he wonderful material that makes markable feat possible is called It can not melt. It is perdry to the touch, and yet it is old that it will make a thermomdown to 110 degrees below

have noticed the small bubbles rm and rise to the surface in op bottle when you pry off This new ice is made out same gas that forms those bub-In other words, it is carbonrid gas cooled down and comprest il it finally forms a solid, frozen

solidified carbon dioxid has been ed on a 'aboratory scale sevmes, but this is the first appliof this queer freezing agent preservation of ice-cream. Its the result of a long search by Vork ice-cream manufacturer method of packing his product all packages so that customers ake it home and keep it in peredition for hours afterward. Altho the temperature of dry ice is than the North Pole in winterit may be handled with the bare ided the skin of the finnot allowed to touch the solid for more than a second or two ime. In the ice-cream plant, s of dry ice are sent to the packom, where a workman places ndrical piece in a large carton, also holds a smaller container with ice-cream.

container, as well as that holds the ice-cream, is of paraffined cardboard and is, , a fair heat insulator, so that armth from the outside air penes slowly. Instead of heating and ting the ice-cream, the air warms rface of the block of frozen cardiexid and gradually converts latter back into a gas again. he gas then passes away through all hole in the outer container, when it is all evaporated no trace ins to show that there ever was hing in the larger container exthe package of ice-cream."
