Having inaugurated these systems of army and navy reserves, let us suppose the immediate effect of a declaration of war so far as Canada is concerned.

First.—The Canadian Government calls for 5,000 active militia for garrison duty at Halifax, Bermuda, and Quebec. Simultaneously the Licutenant-General Commanding in British North America orders the Royal Militia Reserve to report at Halifax.

The Admiral Commanding orders the Royal Naval Reserve to report at Halifax, assembling a portion of the North American squadron at that station, and a sufficient fleet of transports and fast cruizers to fit out and coal at the same place.

Let us say, then, that within twenty days we have assembled at Halifax:

Regulars (relieved garrisons)	5,000
Colonial Army Reserve	10.000
Colonial Navy Reserve	3,000

18,000

who are ready for embarkation in the transports, and to sail for any destination.

We have the vessels, the ercws, and the men necessary to carry out this scheme ; what, then, is necessary in order to secure this state of preparation ?

1st. A well digested scheme and a thorough understanding between the Colonial and Central Governments.

2nd. The establishment at each colonial station of a sufficient supply of arms and munitions of war to meet the requirements of the defined plan of operations.

3rd. The establishment of graving docks upon colonial stations, in order to secure the immediate repair of injured vessels.

4th. The establishment of properly garrisoned coaling stations upon each supply route for the use of cruizing squadrons. Coal might be supplied equally as well from the colonies as from England, although this does not seem to be the opinion of the Admiralty Board. It is a mystery to the uninitiated, however, why Nova Scotia cannot supply the North Atlantic squadrons—British Columbia the North Pacific—Natal the South Atlantic and Indian Oceans—New Zealand the South Pacific—and Labuan the China Sea. All that most of these places require are the means for the development of their mines.

5th. The selection in peace time of suitable fast steamers, owned by private ship-owners, for cruizing and transport services. If the Captains of these vessels were commissioned as Navigating Commanders in the Naval Reserve they would have an interest in their work, their status would be defined, and they, with their crcws would be responsible for navigating the vessel. A combatant Navy Officer, with a fighting prew, would have to be placed upon each vessel, but the duties would not clash, as the latter would be engaged in the special duty of preparing his vessel for fighting or in fighting it. The proper armament for such vessels seems to be the 12 pr. rifled gun, which is light enough to be worked on any ocean steamer without its needing to be strengthened, and at the same time has sufficient penetration to pierce the side of any unarmoured vessel. Every steam supply vessel of the merchant navy should, in war time, carry from four to six of these guns, and their possession would enable them to bid defiance, to any ordinary privateer or unarmored vessel.

The above conditions being secured, I can conceive of no reason why the various colonies should not play an important part in Imperial defence. In the case of Canada, it must be borne in mind that the Straits of Gibraltar are no further from Halifax than Liverpool- and that Malta could be reached from Halifax as soon as from London. Conceive the advantage to Great Britain if an expedition of 15,000 men were known to bo fully equipped and supplied with all the material of war, having its base of supplies and reinforcements in Canada, its transports, oruizers, and supply vessels, and the North Amer-

ican Squadron at hand to keep up communication with base! Conceive that this expedition, complete within its could be launched against any part of the European co within thirty days from a declaration of war! Consider power which this knowledge would give the Commander Chief, that he held a division in hand, complete in.organ tion and equipment, with a separate base of supply and me of protecting that base, and that this division could be used support, reserve, or in diversion, and, if necessary, forn separate expedition for aggressive purposes!

The same rule applies to India, and, in a modified scale. Australasia. India has already sent troops to Malta; if theatre of war is to be in Asiatic Turkey or Egypt; her an could furnish the advance guard, from its proximity. T native army of India consists of 126,877. It is the opinior General Upton, that the whole of this force could be remo without danger. He says (p. 83, "Report upon the Arm of Asia and Europe"), "but without aid from England, "railway system by itself is sufficient to enable 60,000 Brit troops to hold India almost indefinitely." Supposing t Bombay and Madras were each to furnish an army corps mixed troops, leaving the Bengal establishment intact, th would still remain in the Bombay Presidency 9,000 men, in Madras 18,000 men. Quite enough for garrisoning imp tant points in those secure parts of the country.

These two army corps should be self-contained, and h their base in India, operating as an Indian contingent, un officers who would understand the peculiar constitutions prejudices of the force.

But in addition to the native army of India there is a la military element to draw from in the armies of the nat Princes, many of whom offered their services in anticipation a war hetween England and Russia two years since. 7 total number of troops employed by native Princes is stated be 300,000. Of these the

Nizam of	Hyderabad employs	45,000725	guns
Maharaja	Scindia		<u>,</u> ,,,
Gaekwa o	of Baroda		"
Maharaja	of Jaipur	14,000312	"
u	Odainur	22 000 538	
"	Kathiawar	19,000508	6 6
		•	

Collectively, the native Chiefs command 5,252 guns, 9,3 trained artillerymen, 64,172 cavalry, and 241,003 infant Of course many of these are very irregular soldiers, but Persia or Afghanistan were to join with Russia in an invaof Iudia, these irregulars would fitly cope with the fie Afghans, the cruel Persians, or the savage Tartars. It m not be forgotten that, but for the noble conduct of some these Chiefs, India would probably have been lost to us, u porarily at any rate, in 1858.

To be continued.

The Military Display on the Queer Birthday.

THE NAMES AND NUMBER OF THE VISITING CORPS.

THE SHAM FIGHT.

We are indebted to Lt.-Col. Duchesnay, D.A.G., for a c of the following plan of the General commanding I Majesty's forces in Canada, for the military celebration of Queen's Birthday in this city :---

THE REVIEW ON THE QUEEN'S BIRTHDAY.

It is expec. I that the following troops will assemble Quebec to celebrate the Queen's Birthday on the 24th 2 next:----
