

A NEW DEPARTURE IN THERAPEUTICS.

Physiological Remedies: Desiccated Thyroids, Cerebrin.

As a result of the well-known investigation of Dr. Brown-Sequard and other eminent therapeutists, materia medica has recently been largely extended by resort to the use of products representative of certain glands or tissues of the animal economy.

As we have always made the manufacture of the digestive ferments a specialty, and enjoy every facility for the preparation of products of this character, we will undertake to supply some of these new remedies, of which we now have ready:

DESICCATED THYROIDS

In the form of an impalpable powder, representing in permanent form the thyroid glands of sheep. This product is of such strength that 15 grains represent one gland of average size. It is highly recommended in the treatment of Myxœdema.

CEREBRIN,

Prepared after the formula of Dr. William A. Hammond. Put up in glass-stoppered ounce vials.

[While Dr. Hammond has recommended maceration of the brains for six months, we have modified his method in such manner that we are enabled to thoroughly extract the crude material in as many days.]

One serious drawback to the use of these products has been the difficulty in getting the necessary crude material, and the disagreeable character of the work involved in their preparation.

Again, it is only by the most scrupulous attention to the minutest details that asepsis in the finished article can be secured and assured.

The well-known reputation of our house is a guarantee of our ability and intention to fulfill every requisite. We do not doubt that many interesting results will follow the application of these new physiological remedies.

It is our purpose to extend this list from time to time. Descriptive literature of those announced will be supplied on application.
